Playtesters: A lot of people have played over the years, but mostly the Basement Generals. They are, in no particular order: Ken "Lead Addict" Boone, Chris "Cluck Amok" Cluckey, Greg "Where's the cover?" Moore, the 3 Scotts: (Mathews, Wagner and Lindsey), Roger "Just Got Rogered" Reed, Jon "Gas Warfare" Fleckal, Jay "Propaganda Architect" Reese, Ramon "Silver Fox" Olivera, Steve "Dutch Oven" Willaredt, Doug "D.E.F." Strue, Brett "Polska" Murawski, Thomas "Foss in the Haus" Foss, Marshal "Handsome Pete" Wiley, and his sister Rowan "Hugs When I Need 'em" Wiley.

The Brothers Arnold, Chris & Jay. McMurray.

My playtesters from Across the Pond, the *Fistful of Everything* group: James "Oshiro" Sharpe, Nick "Malamute" Futter, Mark "Dr. De'Ath" Evans and Steve "Elk101" Wilkie.

Special thanks goes out to the *Fistful of Lead* community for their continued support and ideas, and anyone over the years who has played and left a nice review on a web site. You're the reason we have a following.

Special, special thanks goes to my wife Robin, who does all the heavy lifting. She takes the orders, fills the orders, runs the website, handles social media, and on and on. Basically she does 90% of the work so I can bask in all the glory.

Introduction

Rocket engines blaze to life. Lasers light up the formless void. Galactic Empires clash. A lone hero rises up to fight for the resistance.

Welcome to the world of ***Fistful of Lead: Galactic Heroes!***

In ***Galactic Heroes***, or ***GH*** for short, you'll take on the role of a Hero or Villain, leading a scruffy pirate crew looking for adventure, or maybe a troop of faceless soldiers of the Empire in search of bringing order to the galaxy. It's really up to you!

Like all the *Fistful of Lead* games, you'll only need 5 or 6 miniatures per player. You can play 1-on-1 games or larger skirmishes with up to 6 or 8 players. This book contains all the information you need to play a game, including rules for building your forces and how to set up the table for different scenarios. Most players will pick up the game mechanics quickly, even people who haven't played a wargame before. If you've played *Fistful of Lead* before, a lot of this will be familiar.

Galactic Heroes allows you to play a small scale wargame in the far flung future, a galaxy, far, far away, a grim, dark future 40,000 years from now, or a certain Red Planet where swords and rayguns reign supreme. These rules are whatever **YOU** think Sci-Fi looks like, from your favorite Space Opera to gritty Pulp epic.

This is **NOT** a simulation of future warfare. It **IS** a great way to spend a couple of hours with your friends having fun and playing with space men.

What's different about this edition from the original *Galactic Heroes* book? We've fixed a few errors and hopefully explained a few rules better, but mostly we've added new sections that were originally released as separate books.

We've added the Vehicle rules, and the *Codex Galactica*. Now it's all in one big book!

I've tried to cover most situations that arise in the game, but I can't pretend to know I've covered them all. If something comes up not covered in the rules, players should try to come up with a mutually agreeable solution. If that doesn't work, roll a die!

And, since you paid for these rules, they are ultimately **your** rules. If you don't like something, change it.

So check the seals on your vac-suit. Have your blaster at the ready. It's time to see if you're a Galactic Hero!

What you need to play

Miniatures

Galactic Heroes isn't tied to a specific miniature manufacturer. Indeed, half the fun will be using whatever you have on hand. Remember, this is your sandbox to play in.

This game is designed with 28mm scale miniatures in mind. It's a popular scale and on the table the ranges and movement scales look right. You can, however, use smaller or larger scales without altering the rules. With the huge variety of 15mm scale miniatures out there, you could have a large game in a small space. You can convert inches to centimeters at smaller scales if you think it looks better.

You'll most likely want to mount your miniatures or figures on bases. This makes them easier to handle and adds to the overall look of the miniature. The base size has no effect on the rules.

Throughout the rulebook, we'll use the term miniature, figure and model interchangeably.

Dice

To determine the outcome of the actions of your miniatures, you'll be using dice. You'll mostly be using a 10 sided die, hereafter referred to as a d10. A handful will do.

For some of the advanced rules, you'll also need a few 8-sided and 12-sided dice (d8s and d12s). All these dice should be available online or at your local hobby and game store.

When rolling, a roll of "1" is generally considered bad, and a 10 or above is considered good. Some special conditions might even be triggered by these rolls. On a 10 sided die, the "0" face is read as "10".

Playing Cards

You'll need an ordinary pack of 52 playing cards or the custom cards available through **Wiley Games**. These cards are the core of the rules and are used to determine which player is acting when.

Measuring Tape or Ruler

You'll need something to measure the distance miniatures move and shoot. A tape works best due to the longer ranges of some of the weapons. All distances are measured in inches and are made from the center of the miniature's base or head, to the center or head of the target. The same is true for movement. Measure from the center of the miniature's base to the place they are moving.

The Gaming Table

For games, especially one player vs. one player, you'll need at least a 3 foot by 3 foot playing area. This is about the size of a kitchen table, which is why we often refer to the gaming area as the table or tabletop. This gives you a little room to maneuver before the shooting starts.

For larger games, you'll need more space to accommodate other players, but the maximum will be a 6'x4' table.

Playing the Basic Game

What follows are the Basic Rules. Once you understand these, you'll be able to add on the Advanced Rules seamlessly.

Each turn is divided into 2 phases.

1- SHUFFLE CARDS

Grab ALL the cards. That means the cards in the discard pile and the unplayed cards and shuffle them together before each turn. This ensures that each round there is a chance to get *Special Cards* (see below).

2- DEAL CARDS, THEN TAKE ACTIONS

Each player is dealt one card for every miniature they control. *For example, Scott has three miniatures in his group, so he gets 3 cards. Ken has two left after a previous turn, so he gets 2 cards.* Players are allowed to look at their own cards, but not the cards of others.

The turn is played out from highest (King) to lowest (Deuce) card. Aces are explained in *Special Cards*, below.

A player or referee is designated as the Caller. They begin the turn by calling out "Kings!". Every player with a King card (if there is one) throws it down.

Cards cannot be saved for later. Each card "activates" one of the player's models. The player then takes **TWO actions** with that model (see *Actions*, below).

Once a model has been activated and done its actions, it may not be activated again until next turn.

Next "Queens!" are called, and all players with a Queen card go, then Jacks, Tens, etc.

In the case where more than one player has the same card, Spades go first, then Hearts, then Diamonds, then Clubs are last.

Suit Order

For added help, your guide through the rules is FFOL-03. He's a bit cranky and doesn't particularly like humans, but he's full of useful information.

"Attention, Human! It's the beginning of a new turn. Steve has been dealt three cards, one for each model he controls. He gets a King, a Jack and a 5 card.

Mike has four cards. The caller calls out "Kings!". Steve has two models in cover and one lone meatbag standing out in the middle of landing field just asking to be a target. Steve decides to use his King to activate the model on the field.

He throws down his King and takes both actions to move to a nearby warehouse. Next, "Queens!" are called. Nobody has one, so the turn proceeds to Jacks. Both Steve and Mike throw down a Jack. Mike has a Jack of Spades so he goes before Steve's Jack of Hearts. Play proceeds until all models have been activated. Does that compute?"

The Quality Die

The outcome of most miniature's actions will be determined by a die. This is used for Shooting, Close Combat, Recovery and any Task rolls. Most of the time this will be a 10-sided-die (d10), but some traits may change this to an 8-sided-die or 12-sided-die. Unless expressly mentioned in the rules, the default die used for rolling is the d10. For example, the Veteran trait means ALL rolls by this miniature use a d12. The key there is "all rolls". Whereas, the Ranged Fighter trait means a miniature uses a d12 for Shooting and d8 for Close Combat. That means all other rolls by this miniature use d10s.

Special Cards

In addition to activating figures, some cards have special qualities. They are referred to as **Special Cards**.

They are played just like normal activation cards, but allow the player to do some unusual feats and spice up the game. The Special Cards and their qualities are:

Queen of Hearts- If the miniature activated with this card has any Wounds, (see *Wounds*, below) **ONE** is healed. Remove a Wound counter instantly. They may stand if prone. **The model still has its 2 actions.**

Queen of Spades- If the miniature activated with this card is Shaken, (see *Shaken*, below) it recovers instantly. Remove **ALL** Shock markers. **The model still has its 2 actions.**

One-Eyed Jacks (Hearts & Spades)- The miniature activated with this card has a **+1 to any Shooting rolls this turn.**

Two-Eyed Jacks (Diamonds and Clubs)- The miniature activated with this card has a **+1 to rolls in Close Combat** this turn.

Sevens (any suit)- The miniature activated with this card may **re-roll any ONE die result** this turn.

Sixes (any suit)- The miniature activated with this card may reload automatically. This overrides the normal reload rules (see *Reloading*, below). The figure still gets 2 actions.

Twos (any suit)- The miniature activated with this card may choose to roll 2 dice once for any Shooting, Close Combat, Task or Recovery rolls, and pick the best result.

Aces (any suit)- An Ace is wild and can be any card the player wishes. It must, however, be played in sequence. *For example, if you use an Ace to stand in for a 7 card and get the re-roll, it must be played when "sevens" are called.*

"Steve has 2 Aces. He knows he wants to go first in the turn, so when the round starts and "Kings!" are called, he lays down one of his Aces and states it's the King of Spades.

If there are no other Kings of Spades out there (i.e. the real one) he goes first, since Spades come first in precedence. If, however, there was a real King of Spades laid down, the real one would go before Steve's."

Here's another example: Later in the round "Sixes!" are called. Steve's been holding on to the second Ace for just the right moment. The other players have been ignoring one of his miniatures because he has a "Reload" marker and they know he needs two actions to reload. Steve lays down his Ace and calls it a "Six". His model instantly reloads and takes one of his actions to blast away at the models that ignored him! Good work for a Human."

A "real" card always takes precedence over an Ace impersonating it. As in the example above, a real King of Spades goes before Steve's Ace acting as a King of Spades. If multiple Aces are played, all acting as the same card, the order of Spades then Hearts, etc. takes precedence.

Sometimes you'll end up with more cards than figures. This happens when a player has a miniature eliminated before he has a chance to activate it. The player holds on to the extra card until the end of the turn and tosses it on the discard pile.

**WHEN ALL CARDS HAVE BEEN PLAYED
(ALL MINIATURES HAVE BEEN ACTIVATED)
A NEW TURN BEGINS.**

Actions

When a player activates a figure, it gets **TWO actions**. Some different actions include:

- **Moving**
- **Shooting**
- **Picking up / dropping something**
- **Getting on / off a mount**
- **Switching weapons**
- **Recovering from being Shaken or Prone**
- **Aiming**
- **Reloading**
- **Completing a Task**

The list can include anything the players can think up (agreed upon by all involved).

The actions taken by the figure can be different. For instance, a figure could move then shoot, or shoot then move.

The actions can be the same. For instance, a figure could move twice (run), or shoot twice.

It takes one action to attempt to fully recover from a Shaken result or stand up after being Wounded (see *Wounds*, below). Only one attempt per turn may be made. If the attempt fails, no other actions may be made but to fall back (see *Moving*, below). If the attempt succeeds, the figure gets one more action.

It also takes two uninterrupted actions to reload or automatically remove one Shaken marker. See *Out of Ammo* and *Recovery*, below.

Moving

Once activated, figures move at the following basic rates per action:

CREEPING: 3"
MOUNTED: 8"

WALKING: 5"
VEHICLE: 6"

A figure can make any number of turns or face changes during the course of its movement. However, if a model comes within 1" of an enemy it must stop and Close Combat ensues (see *Close Combat*, below).

By measuring head to head, and due to varying base sizes, miniatures might actually have bases touching to be within 1". With large bases, rather than having bases overlap, it's better to just have the bases touch. Some traits or weapons may increase this "zone of control" to 2".

Figure Facing

In the swirl of battle, miniatures in *Galactic Heroes* are able to see in all directions at any time.

Moving off the Board

Miniatures can only leave the table voluntarily. Being pushed backed by combat or other means cannot force a miniature out. If there is a case where this would happen, simply leave the miniature where it is at the edge.

Jumping

Miniatures may jump any distance, up to their maximum move per action, as long as they move an equal distance in a straight line before the jump. If a miniature moves 3", it could jump 3". This total does count against a miniature's total move for the turn. This prevents a figure from taking a Move Action of 5" and jumping 5", then using the second Action to move again for a total move of 15"! The miniature with a move of 5" could only move 10" per turn.

The jump cannot be made more than 1" up vertically, or down more than 3". You cannot jump over other figures unless a skill allows it.

The rule of 1 and jumping: When jumping, roll a die. On a "1" the character misjudges the distance and misses the jump, resulting in a fall.

"An Azullian Shocktrooper is ordered by his Commander to jump from his current position atop a parapet, to an adjacent rooftop. The distance from parapet to roof is 4".

BUT WAIT! He can't do that! That would take his total movement for the turn to 12"!

"Instead, he'll have to break this up over two turns. On his first Action he backs up the required distance to make the jump. He can then use his second action to pass.

The next turn he uses his first Action to make his approach of 4" and jump 4". Since he technically has 2" of movement he could use, he decides to take this as his second Action and get into cover."

Falling

A figure could be forced off the edge of a cliff or building by combat or other means. If this happens, roll d10 +1 for every 3" fallen on the Wound Chart (see below).

Creeping

We're assuming our models are moving cautiously on the battlefield. However, if they really want to be careful, instead of a normal 5" move, a model can creep 3". A creeping model may go slower but will be harder to hit.

Place a "Creep" marker next to the model. It is removed as soon as the model makes a normal move, shoots, or comes within 12" of the enemy. Any enemy shooting at the creeping figure does so at a -1.

Terrain

Since your game probably won't happen on a featureless desert or frozen tundra, let's deal with terrain.

Terrain affects the game in two ways: by impeding movement and giving cover. Cover will be explained more in the Shooting section. We'll deal with movement now.

There are several types of terrain:

Open: fairly obvious, nothing that would impede movement, open fields or roads. No deduction.

Difficult: includes woods, fields full of tall crops, marsh, shallow streams and rubble. Move at Half rate, i.e. 2.5" for Foot, 4" for Mounted.

For game purposes mounts cannot enter buildings.

Impassable: cliffs, wide and deep rivers. As the name says, impassable.

Obstacles: low walls or fences, half the height of the miniature; subtract 1" per Move action. High walls are as tall as the miniature and take an entire action. Anything higher is impassable unless there is a ladder or another way to scale.

All terrain should be discussed before the game begins so that each player is aware of its effects.

Modifiers to movement

WOUNDS: -1" of movement per Wound, per action moving.

SHOCK: -1" of movement per Shock marker, per action moving.

DIFFICULT TERRAIN: Half rate.

OBSTACLES: -1" for low walls and fences, full action for high walls,

UP / DOWN FLOOR: -3"

Buildings

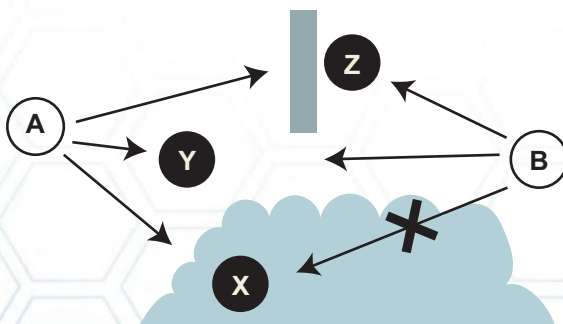

Much of the fight can center around buildings. The size of your buildings may vary, but the general rules governing movement in/out are as follows:

Entering or exiting a building costs nothing, unless the game scenario has dictated a closed or locked door (also see *Knocking down doors*, below). Going up or down a floor costs 3" of movement.

Unless you have interiors for your buildings showing the location of stairs, simply measure the cost for the stairs from the point the figure enters the building. A figure can appear anywhere on the roof (unless a door or hatch is indicated).

Yes, this does mean a figure could theoretically use an action to move from a doorway to the roof of a single story building. This can sound unrealistic, but it doesn't happen very often, and it saves the terrain maker from having to design the "guts" of every building. Some buildings may not have access to the roof, such as a native's hovel.

For Shooter A, X is in Light Cover (within 1" of the edge of the woods). Y is in the open. Z is in Heavy Cover behind a wall.

For Shooter B, X is not a target. X is more than 1" from the edge of the woods. Y is in the open. Z is in the open because B is on the same side of the wall as Z.

Shooting

When a model is activated, it can use one or both of its actions to shoot. In the swirl of a *Galactic Heroes* gunfight, all models have a 360 degree field of fire. As such, there is no facing. Each model can see and shoot in any direction.

Out of Ammo – or Rolling a 1

But sometimes, something goes terribly wrong. Our hero wasn't paying attention to how many shots he had left in his blaster, the plasma is overheated, he emptied a clip to no result or a myriad of other things. You decide the narrative.

This is what happens when a "1" is rolled when shooting. Place an "Out of Ammo" marker next to the miniature. Markers are provided at the back of this book or available from *Wiley Games*. You can even make your own.

When a "1" is rolled, the figure cannot shoot again until he/she reloads. It takes an entire turn (both Actions) to reload. These two actions must be consecutive, and not split over two turns. In other words, if on your first action you shoot, but roll an "Out of Ammo" result, you cannot use your second action to start reloading now, and finish on the following turn. You could, however, use your second action to move to cover!

Line of Sight

Models can only shoot if they have a straight line of sight that doesn't pass through any other model or terrain. This may require getting down to eye level with the model and trying to see what he or she sees. Laser pointers or string are helpful for this, but hopefully in the spirit of good fun, both players can decide if a model has a line of sight.

Miniatures are only visible inside terrain or buildings if they are within one inch of the door, window or edge of the woods. The same is true if they wish to shoot out from inside cover.

Range is measured from the center of the shooter model to the center of the target.

Ranges for the most common weapons are listed later and are divided between **Short** and **Long**.

If the target is in range, and within the line of sight of the shooter, roll d10 (or whatever their Quality die).

**The roll to hit at Short range is 5 or higher.
To hit at Long Range is 8 or higher.**

A Word on Shooting

Our little heroes aren't firing a single bullet, or laser beam every time they make a Shoot Action. In a very cinematic way, they are blazing away in a volley of flying lead or searing energy, reloading whenever they have a chance. If your hero steps out into the hallway of his spaceship to blast an alien and rolls a "1". He didn't step out with an unloaded blaster. He fired till it was empty into the tentacled horror. He just missed spectacularly, temporarily distracted by the alien's awful appearance!

Cover

Our little metal or plastic soldiers are forever stuck in one pose. It would be wrong to think that in their world of the tabletop, they aren't actively crouching behind whatever cover they have, trying desperately not to be hit. Therefore, we have to think of cover in an abstract way.

If a model is behind a linear piece of terrain like a wall, even though the model may be standing presenting a large target, in reality he is crouched down behind it. If a model is in contact with a solid wall, or inside a building looking out the window, the model counts as in **Heavy Cover**, and this is a -2 to the die roll of any model shooting at it unless the shooter is positioned in such a way to outflank the terrain. For instance, the shooter is in the same building or same side of the wall.

It's helpful if the player controlling the model states that they are in cover.

If a model is behind a linear piece of terrain like a wooden fence, or something less substantial than stone, it is in **Light Cover**, and there is a -1 to the die roll of any model shooting at it.

Area Terrain

Some areas on the tabletop can be identified as Area Terrain. These are your woods or tall crops. They should have a defined edge and be called out before the scenario to all players. A miniature has to be within 1" of the edge to shoot out or be shot at.

While in Area Terrain, models receive the Light Cover modifier of -1 to be shot at. Models more than 1" away from the edge of the terrain cannot be targeted. If two models are within the same feature, both are in Light Cover and only have visibility of 6". So if they are more than 6" from each other they cannot target each other.

SHOOTING MODIFIERS TO THE ROLL:

There are several situations where there may be a +/- to the Shoot roll.

COVER:

Light Cover -1

Heavy Cover -2

SIZE:

Target is Small -1

Target is Large +1

Target is Huge +2

WOUNDS/SHOCK:

-1 for each Wound and Shock marker the shooting model has (see *Wounding*, below)

MOVEMENT:

Shooter is mounted -1

Target is mounted -1

Target is Creeping -1

Target is prone* -1

ACTIONS:

Shooter used first action to Aim +1

** A model cannot voluntarily go prone. We are assuming miniatures are dodging, crouching, and ducking. Prone status is only given to models that are down from being Wounded (see below).*

"Lance Lazer has his two actions to take and decides to take a shot at a Faceless Galactic Minion. He is at Short range. He takes the first action to Aim.

He uses his second action to shoot and rolls a "4". Normally, this would be a miss, but because he aimed with his first action this turn, he got a +1 to the roll making it a "5" and therefore a hit. Good work, Lance!"

Shooting into groups

A particularly bloodthirsty player may want to shoot into a group. To see if they hit their target, an innocent civilian or possibly their friend, use the following procedure: use a tape to measure between target and shooter as normal. If the tape crosses over any part of an intervening miniature, that model is a potential target. Roll to hit. If a hit is scored, randomly determine who is hit. If there are two targets, odds hits one, even hits the other. If there are three targets, 1-3 hits first, 4-6 hits the second, 7-9 hits the third and re-roll a "10".

"Grudd Nurgrodd, intergalactic bounty hunter, decides to take a shot into a swirling melee between a Shocktrooper and a fellow hunter, Xurgarr.

The distance is Short range. Grudd rolls a "6", which is a hit. He rolls to see who got hit. Odds the Shocktrooper gets it, even it's poor old Xurgarr. Grudd rolls a "4" and has some explaining to do to the Boss.

Darkness and Shooting

Unless otherwise specified by a scenario, miniatures can only "see" or have line of sight 12" at night or in darkness. This also halves all ranges. A rifle that has a range of 12" for Short range, and 24" for Long range during the day, only has a Short range of 6" and Long range of 12" at night.

Spotting hidden enemies is covered later in the Tasks section.

Close Combat

When a miniature ends its movement within 1" of an enemy, Close Combat occurs. This can happen even if the figure used both its actions to get there. This is a special case, however. All other times, a miniature must use an action to fight, and a miniature can only initiate 1 Close Combat a turn, unless they have a Trait that lets them (See *Traits*, below). However, further Close Combats can be initiated by other miniatures, such as multiple Combats. (see *Multiple Combatants*, below)

The basic procedure for resolving Close Combat is simple. The two opponents both roll d10 (or whatever their Quality die is). Both figures add any modifiers from weapons or conditions to the die roll.

The highest modified die is the winner and subtracts the loser's die roll total.

If the loser isn't put Out of Action, the winner may push the loser directly back 2" out of Close Combat range or keep them locked in Close Combat. The winner also has the option of switching positions with the loser. This may come in handy to keep from being pushed off a wall or backed into a corner.

If a miniature finds itself starting its turn within 1" of an enemy, they **MUST** use the first action to fight in Close Combat. This overrides any Recovery attempt. See *Recovery*, below.

Use the difference between the two rolls to give you a bonus when rolling to Wound your opponent. (see *Wounding*, below)

1-2: no bonus

3-4: add a +1 to the Wound roll

5-6: add a +2 to the Wound roll

7+: add a +3 to the Wound roll

If the score is a tie, the initiator of the Close Combat can still decide whether to keep their opponent in Close Combat or push them away as above, but there is no roll on the Wound chart.

The winner of a Close Combat may:

A: Stay locked in combat.

B: Push the loser back, up to 2".

C: Switch places with the loser.

A model cannot be "outflanked" by another model. When a model comes within Close Combat range, the target will turn to face the attacker. This prevents unrealistic movement where the attacker runs past, then around his opponent to hit him from behind. Not that it would give them a bonus anyway.

Miniatures must engage once they are within 1" of each. You can think of this as a "Zone of Control".

Rolling a "1" in Close Combat

In *Galactic Heroes*, rolling a "1" is always bad, but some cases are worse than others. When you roll a natural "1" in Close Combat it's a **Fumble**. In addition to whatever your opponent does to you on his Wound roll, you are also disarmed. They knock the sword from your hands, or your spear shaft splinters against a rock. You decide the narrative.

You are without that weapon for the rest of the game, unless armed with another weapon or spend an action to pick it up. A miniature cannot be in Close Combat range when picking up a weapon.

Multiple Combatants

If a miniature is attacked while still in contact with another opponent, they will turn to face the new opponent. A Multiple Combat then takes place.

A Multiple Combat can take place by intention or accident when a model moves within 1 inch of two opponents.

All the models involved roll d10 (or whatever their Quality die is), adding modifiers. The highest roll wins subtracting the lower roll of his or her opponent. *It is possible for a figure to lose to one opponent but beat another.*

"Dash Dixon is giving a Khanate trooper what for. He failed to best him out last turn and they're still locked in combat. Dash's sidekick decides to help out his pal when he is activated."

They all roll. Yes, when a new model enters the melee another fight occurs. Dash's die is an "8", beating the Khanate Trooper's "6", which drops to "5" due to the minus one modifier for being outnumbered. The Trooper, however, beat the sidekick by 2, because the sidekick rolled a "3".

Dash decides to push the Khanate Trooper back out of Close Combat and rolls on the Wound chart adding +1 to the roll for beating him by a margin of 3. He rolls a "5", which would normally slap a Shock marker on the Trooper, but the bonus makes it a "6" and Wounds him. Before the Trooper goes down, he rolls to see what he did to Dash's sidekick. He had beaten the boy by 2, giving him no bonus to his feeble Wound roll of 2. This grand total of 2 means the sidekick gets a Shock marker."

"Here's another example: A Planetary Scout is taking on two shaggy barbarians from a back-water planet. The barbarians roll a "10" and a "6", with the Scout getting a sorry "3".

Being outnumbered, the Scout has a minus 1 to his roll, knocking his number down to "2". The Scout was beaten by 8 and by 4 points. One of those gives a +3 to the Wound roll, and the other a +1. The Wound rolls end up 5 and 7. With the bonus, that means a Wound and an Out of Action. Luckily, the rest of the Scout's landing party is just over the next ridge...."

Close Combat Modifiers to the Die Roll

-1 for each Wound and Shock marker the figure has.

+1 if Charging. This move must be from outside the defenders 1" zone of control. This bonus is not used if already in Close Combat.

+1 if mounted fighting dismounted (*if the defeated model is Wounded, he is dragged from the mount*).

Outnumbered: **-1** per attacker after first (i.e. -1 for facing 2 attackers, -2 for 3 attackers, etc).

Prone or no weapon: **-1**

Close Combat Weapon: **+?** according to weapon.

Defending a wall/defensive terrain: **+1**

"I find that doing the following speeds up Close Combat, and reduces confusion:"

- Roll the dice.

- Add up your modifiers, positive and negative.

- Change the actual die face to the final roll.

- Compare the totals before rolling on the Wound Chart.

Knocking down doors

Smashing down a door or tearing down a fence is treated just like Close Combat, except the object has a fixed roll depending on its strength.

Wooden fence: 3

Door: 4

Reinforced door: 6

Stone wall or rubble: 7

Miniatures attacking a door roll a die and compare it to the "roll" of the door. Just like in Close Combat, if you beat the roll, compare the difference and roll on the Wound Chart.

Failure means the object is undamaged. A miniature cannot be hurt by attacking a door!

A Shock result means nothing, while a Wound result damages the door or object, while an Out of Action result destroys it or makes a 2" wide hole in the case of a fence or wall.

You may assign structures a number of wounds. I suggest three. Wooden fences have the same wounds as a reinforced door? Yes, because it's easier to damage the fence with its 3 defense roll.

Wounding

Each time a miniature is hit by Shooting, Close Combat or falling, roll on the following chart:

Roll	Result
0 or less	No effect
1-5	Shock
6-8	Wounded & Down
9-10+	Out of Action

A +1 is added to the die roll for each Wound already sustained by the affected miniature.

Shaken:

The miniature takes no damage but has temporarily lost courage. This can be thought of as a minor wound or just hesitation due to bullets whizzing past their head. Mark them with a "Shock" counter. These can be found in the back of the book.

If the result came from being shot at, and the figure was in cover, they stay in cover. If in the open, they will immediately make a move action towards the nearest cover (same if mounted). This move cannot take them towards an enemy figure.

If the result was due to Close Combat, the winner has the option of staying in contact, pushing their opponent away 2" or switching positions with the loser. Mark the loser with a "Shock" counter.

The next time the model is activated, he or she has the option to roll for Recovery (*see below*) as long as they are not within 1" of an enemy.

Until the Shock markers are removed through Recovery, the miniature has a -1 modifier per Shock marker, to all Shooting, Close Combat, Task and Recovery attempts, and a -1" to move actions per Shock marker.

Wounded & Down:

The miniature is hit and drops where he/she is, prone. To show a figure is Wounded, place them on their side or mark them with a "Down" marker. The miniature also now has a "Wound" marker. Both Wound and Down markers are provided in the rulebook.

From now on the figure has a -1 modifier per Wound, to all Shooting, Close Combat, Task and Recovery attempts, and a -1" to move action per Wound. This is in addition to any Shock markers the miniature may have.

A down, wounded figure does not exert the 1" rule for Close Combat.

If a miniature is Wounded while standing within 1" of a rooftop edge, roll d10. An even result means the figure falls wounded on the rooftop. On an odd result, the figure falls off and rolls again on the Wound Chart, with a +1 to the roll per 3" fallen.

If a model is attacked in Close Combat while Wounded and down, the figure remains down and not only receives the negative modifier for being wounded, but also a -1 for being down and any Shock markers they may have.

If the down miniature wins the fight, they may immediately make a Recovery roll to stand.

Defeated models that are mounted fall off, and the mount runs away. This may seem unrealistic, but it's easier in game terms. That way you don't need a separate mount without a rider that you have to randomly move each turn.

Note- If you are lucky enough to have separate mounts and riders, you may, of course use them. Use the d10 to randomly move the horse. Roll a d10. The "point" of the die gives you a direction, and the number is how many inches moved.

A miniature that takes 3 Wounds is Out of Action

Out of Action:

The miniature might be dead, too wounded to carry on, or just plain scared. Remove the model from the table or use some other method to show their state.

Armor

Armor is discussed more in depth later in the book but here we will mention that armor can be worn to lessen the effect on the Wound chart above.

Miniatures will be in one of these 6 states. You can mark them on the table or their sheets.

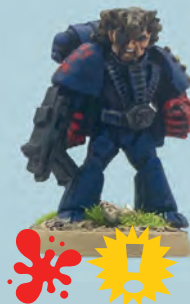

Okay- The miniature is holding up fine to the rigors of combat.

Wounded and Down- Each time a miniature is wounded, they become prone as well. The miniature is down until they make a Recovery roll.

Shaken- Blows to the helmet and arrows whizzing by have temporarily rattled the miniature. They'll need to Recover to be Okay again. Shaken markers can stack up quickly making the miniature worthless for this fight!

Wounded and Shaken- A miniature can be Wounded and have Shaken markers. You can try to Recover, but it will only remove the Shaken status.

Wounded- The miniature has taken enough damage to make their effectiveness drop. More wounds could put them Out of Action. The only way to get rid of a wound is by a Healer or a Queen of Hearts.

Wounded, Shaken and Down- as "Wounded and Down" above, but even if the Recovery roll to stand is made, the miniature still keeps the Wound and Shock. Shock can only be removed by a separate Recovery attempt after standing.

Out of Action- This miniature may not be dead, but they've taken enough damage to take them out of the fight. They are removed from the table

Recovery

Shaken:

A miniature that has Shock markers on them is Shaken. When a Shaken figure activates, the player has several options:

Do nothing about the shock and play with the Shock markers on them. Shock markers on a figure cause negative modifiers to their actions. Every Shock marker causes a -1" movement penalty per action. *For example, a miniature with 3 Shock markers only moves 2" per action, instead of their usual 5".* Every Shock marker is a -1 on Close Combat, Shooting, Recovery and Task rolls. A miniature can quickly become combat ineffective if they don't attempt a Recovery roll to remove the Shock markers.

This is the only option if the figure starts its turn within Close Combat range.

Rest- The player can elect to spend both actions to remove 1 Shock marker. This is automatic and a good option if you don't want to take any chances. This option can't be used if within 1" of the enemy.

Recovery Roll- Or, finally, the player can roll to remove all the Shock markers using the procedure below.

Each Shock marker or Wound subtracts 1 from the roll.

Roll d10

6-10+: miniature becomes unshaken and still has one action. Remove ALL Shock markers.

2-5: miniature is still shaken but may fall back up to 5" away from the enemy. They may not roll again this turn to recover.

1 or below: the miniature has decided to "live to fight another day" and is removed from play.

If a miniature is attacked in Close Combat while they have Shock markers, they'll fight back, but receive a -1 modifier to his Close Combat roll for every Shock marker they have. If the miniature wins the subsequent melee it will gain back its courage, unshaken. Remove the Shock marker or markers.

If a miniature is activated using the **Queen of Spades Special Card**, it automatically recovers without having to roll, and still gets its 2 actions. Remove any shock markers.

Wounded

A miniature that has a Wound **MUST** try to recover if they are down or prone unless it is starting its turn in Close Combat.

Each Shock marker or Wound subtracts 1 from the roll.

Roll d10.

6-10+: miniature is still Wounded but may stand up.

2-5: miniature is still down and Wounded and the miniature may crawl 2". They may not roll again this turn to recover.

1 or below: the miniature has succumbed to their wounds and is Out of Action.

If a miniature is activated using the **Queen of Hearts Special Card**, it automatically gets up without having to roll, removes 1 Wound marker and still gets its 2 actions.

A Queen of Hearts or use of a Medic is the only way to remove a Wound.

OPTIONAL-

Gruesome Deaths and Heroic Sacrifices.

When an enemy is put Out of Action with a natural roll of 10 or more, it is considered a **Gruesome Death**. The killing blow (or gun shot) was so horrific that any of the unfortunate victim's allies within 6" must pass a Regular Task roll (see *Tasks*, below) or gain a Shock marker. If Grunts are dispatched with a Gruesome Death, there is no need to pass a Task roll. They are beneath the notice of other troops.(see *Grunts* in *Building your Crew*, below)

A miniature with Wounds or Shock or both may elect to make a **Heroic Sacrifice**. This doomed hero can convert any negative modifiers from Wounds or Shock and convert them to positive modifiers in one last Close Combat attack. After this combat, no matter the outcome, the miniature is immediately Out of Action and removed from the game. This will have repercussions in a campaign setting, so don't use it lightly. Grunts cannot use Heroic Sacrifice.

Retreat

If a miniature has **MORE** Shock markers than Wounds left it must Retreat. The retreating miniature must immediately fall back away from the enemy 2 moves. This move ignores any terrain (other than impassable) or Shock penalties as the figure runs away.

After this mandatory move is made, remove all the excess Shock so that the number of Shock markers equals the number of Wounds left on the miniature.

The figure may activate as normal on their next turn. However, with reduced movement and negative modifiers to hit in combat because Shock is equal to the number of remaining Wounds, the best action is to Recover.

If the miniature is forced to Retreat and has nowhere to retreat to (cut off by terrain or enemies), it routs and is removed permanently.

Other Actions

Ready

When activated, a miniature can use its action to "Ready". This can be considered overwatch or holding. The miniature is waiting for an opportunity later in the turn to strike at an enemy when they appear, or just holding to see what happens. Mark them with a Ready marker. They can then wait until later in the turn to interrupt another miniature's actions to shoot, only at the unit that activated, at a -1 to hit. This target must appear within line of sight of the Readied miniature.

A readied miniature can also respond to being charged in Close Combat and counter-charge. If they pass a Regular Task roll (5+) (see *Tasks*, below) they may counter-charge the enemy miniature, negating their charge bonus in Close Combat. This move is made immediately. Both miniatures should try to make a full move towards each other, but will meet where their moves first intersect.

The Ready action cannot be used in conjunction with a card's special ability if it has one. If for instance, you activated with a Jack of Spades, you cannot benefit from the +1 to shoot when you interrupt later in the turn.

Example- A sneaky native is positioned in some trees. He activates on a Jack of Hearts but has no targets available. He uses his action to Ready. We put a Ready marker next to him to help remember. Later in the turn, an enemy breaks cover and moves across the open field. The native's player politely asks his opponent to hold his movement while he takes a shot. The shot will be long range. He does not get the Jack of Hearts +1 bonus to shoot.

The native causes a Shock marker, and the enemy soldier is forced to cover."

The Ready status goes away at the end of the turn.

Tasks

Tasks

Tasks are things that require rolls to accomplish, like searching for hidden loot, setting crops on fire, or putting up a siege ladder. Performing a Task is the action for the miniature.

TASK	DIE ROLL
Easy	3+
Regular	5+
Hard	8+

Tasks can be broken down into **Easy**, **Regular** and **Hard**. It's really up to the players how tough or easy a Task is. Some factors can make them easier or harder. If an enemy is within close range or within an enemy move, move the Task difficulty up one level. Players can also decide to make things easier, like a hacker cracking a computer code.

For example: Searching is a Regular Task, requiring a 5+. However, searching with an enemy miniature within 5" becomes Hard.

If a miniature has any Shock markers, they have a -1 to any Task rolls, per Shock marker.

A natural 10 or more, no matter how hard, passes a Task, and a "1" means something bad has happened. For instance, rolling a 1 while trying to set some crops on fire means your torches went out.

Failing a Task without rolling a 1, makes the Task one level harder the next try. A unit is trying to dismantle a barricade (Regular 5+). They fail with a roll of "3". Next turn they'll need to make a Hard roll (8+). If they fail again, the barricade was well built and it will take a 10+ on all subsequent attempts.

Swimming

Water is divided into two types: shallow and deep. Both should be identified before a game and clearly marked. Shallow water can be crossed like rough terrain at half the miniature's normal rate. Deep water requires swimming.

Swimming is an Easy Task. When a figure enters deep water the player simply makes a roll. This differs from regular actions in that it doesn't use up the action. A swimming figure moves 5".

If a miniature is wearing armor (see *Equipment*, below) swimming becomes a Regular Task, and if in Heavy Armor, it becomes Hard.

If the roll fails, give the miniature a Wound to represent them taking in water and panicking. They will have to roll to Recover next turn. If a "1" is rolled, they sink beneath the water, Out of Action.

If a natural 10 or more is rolled, the figure can immediately take another move of 5".

Lighting fires

To start a fire, a model must be in base contact with a building or similar structure. The structure must be flammable. A solid concrete construct cannot be ignited. Decide before the game, which structures are flammable.

The model must make a Regular Task (5+) roll to start a fire. After a successful roll, **roll a D10**.

1 or 2: Nothing happens

3-8: Place a fire marker

9 or 10: Place two fire markers

At the end of each turn, besides checking for models inside burning buildings, roll to see if the fire grows using the chart above.

For medium sized structures, once a building has six fire markers, it collapses. Any model inside is killed. You can adjust the number of fire markers for larger or smaller structures.

If you want to try and fight a fire, use similar rules for lighting. To fight a fire, a model must be in base contact with a building. The model must make a Regular Task (5+) roll to fight it. **Roll a D10**.

1 or 2: Nothing happens

3-8: Remove a fire marker

9 or 10: Remove two fire markers

While a building is on fire, any model inside or on the roof at the end of a turn, must roll on the Wound chart.

A “Shock” result forces the model to leave the building and stop within 2” of the structure, in a coughing fit.

A “Wound” result means the model is being overcome by the smoke and heat. They must make a Recovery roll as usual to escape the flames.

An “Out of Action” result, of course, means the model has succumbed either from the smoke or flames.

Hiding

You may use an action to hide if your miniature is in terrain or cover. The miniature cannot hide if there is an enemy within line of sight.

Once concealed, the miniature cannot be targeted by an attack, unless spotted by an enemy by making a Hard (8+) Task roll. The enemy must be within 12” to make this roll and have line of sight to the hiding place. A hidden miniature is automatically spotted if an enemy is within 6”.

While hidden they are immediately revealed if they move or perform any other action like shooting.

They will still get the benefit of whatever cover or terrain they are currently in if attacked. It's just that now everyone knows where they are.

If a model wishes to hide again, they must be out of line of sight of the enemy. This prevents a player from shooting with their first action, then hiding again with the second. The sniper has been revealed to anyone within sight of him.

Leaders

We found that each player can comfortably control 5-8 models. One model should be Leader of the group. Leaders at this scale could be a mercenary sergeant, a ship captain, or native warleader. That's not to say you couldn't create a scenario where a higher ranking leader is present, but rarely did a Admiral lead so small a number of troops into battle.

The role of the leader in *Galactic Heroes* is not only to fight on the tabletop, but also lend some special bonuses to his/her men.

Leaders give a +1 to the die roll to any model attempting to make a roll to recover from Shock or stand after being Wounded. The model must be within 12" and within line of sight (not blocked by terrain) of the Leader to give this "encouragement".

A natural roll of "1" still causes a model to route when attempting to recover from Shock or expire from their wounds.

Example of a Turn

"Here's an example of a couple of turns. Our two players are Mike and Steve. They each control 4 models. Steve is dealt:

Mike gets:

Steve volunteers to be the Caller and starts with "Kings!"

Mike has the King of Hearts so he discards it and starts to activate a model, but Steve interrupts him.

Steve has decided to use his Ace of Clubs as a wild card King of Spades. Spades go before Hearts in suit order. Steve activates first using both Actions to move, followed by Mike with his King of Hearts. Mike moves his figure twice.

"Queens" is called next. Only Mike has a Queen. It is the Queen of Hearts, which used as a Special Card allows him to heal one wound from the activated model. Mike has no wounded models, so this one just gets used as a regular card.

Mike uses the first Action to move his model out into the open, and the second to shoot at one of Steve's soldiers. It's a miss.

"Jacks" are next. Steve activates another model and plans to use his first action to aim and his second to shoot at Mike's model in the open.

By using the first action to aim, Steve gets a +1 to his Shooting roll. Steve gets an additional +1 because he activated his model with a "One Eyed Jack", which used as a Special Card, gives him +1 on shooting rolls

Mike's model is 13" away. Steve's model is using an autorifle, making it long range. Long range requires an 8+ to hit. Steve rolls a "6". This would have normally missed but the two bonuses give him a final result of 8 (6+1+1=8). A Hit!

"Steve rolls on the Wound chart and gets a "7", wounding Mike's model. Where's that Queen of Hearts now?

"Tens" are up next, but neither player has one, so it's on to "Nines". Steve gets to go again.

He decides to try and close with Mike's wounded model and uses both his actions to move. Steve measures and moves his model 10" (five inches per move action) and finds he's short of the 1" distance to be in range for Close Combat. Remember, no premeasuring....

"Eights, Sevens, and Sixes" are called but no one has these cards. When the "Five" comes up, Mike uses it first to move, then shoot. He misses.

The same for Steve when his "Three" is called. But Steve rolls a "1". Out of Ammo! Steve has now activated all his models.

When the "Two" comes up, Mike uses it for its Special Card ability. Any model activated by the Deuce can roll two dice and take the best result.

At 11" he is within Close range for his model's laser rifle. He rolls a "3" and a "9", keeping the "9". He also rolls a "9" on the Wound chart taking his target Out of Action.

The turn is over. All models have activated."

"All cards are shuffled. On Turn 2, Steve is only dealt 3 cards as one of his models is dead. Mike still gets 4.

Mike has:

When "Kings" are called, Mike uses his King of Spades to go first, but Steve had also thrown in his Ace as a wild card to be a King of Spades. Mike has the "real" King and goes first.

Mike uses his actions to move. What a waste of an Ace!

Steve shoots and manages to put a Shock marker on one of Mike's miniatures.

"Queens" is called and Mike uses his Ace of Clubs as wild to be a Queen of Hearts. He activates his wounded model. A Queen of Hearts discards a wound and allows the model to stand and still have two actions.

Mike's model realizes his wound was just a graze and uses an action to shoot back. He misses. He uses the second action to duck into cover.

The cards are called until "Sixes" come up. Steve has an unactivated model with a AMMO marker, and uses it to automatically reload. With two actions still left, Steve aims, fires, and kills one of Mike's unactivated models.

Mike uses a Four to try and Recover his final model. He rolls a "3". His model remains Shaken.

The other Four is discarded. He's out of models now.

Steve has the final figure and activates it with his Three. He uses both actions to close with Mike's Shaken model.

He makes it. They fight a Close Combat. Both models are armed similarly.

Mike rolls a "5", which becomes a "4" because of the -1 for being Shaken. Steve gets a "7". Steve beat Mike by a margin of three, adding a +1 to the wound roll. Steve rolls a 5 +1, and Mike's model is now on the ground Wounded."

Building your Crew

Now that you know the basics, it's time to create your Crew and put them to the test on the battlefield. I've chosen the term "Crew" because it evokes the theme of a lone space-ship cruising the cosmos in search of adventure. You can just as easily decide to call your group a team, squad, gang, lance or whatever you want that fits your vision.

Part of the fun of wargaming, for me, is the story behind the game. Is your crew a team of explorers or group of misfits trying to make their way on the fringe of civilization? Are they a gritty combat team blasting their way through hordes of giant bugs or laser sword wielding heroes trying to free the galaxy?

The following rules are meant to be rough guidelines, designed for balanced play. If there's something you don't like, or think needs improving, let common sense and fair play be your guide.

At the end of the book you'll find a roster sheet to help keep track of your Crew.

Every Crew needs a **Leader**. This person takes the first slot on your roster. This can be a noble space knight, a dastardly pirate or scrappy scrapper. The role of the Leader in *Galactic Heroes* is not only to fight on the tabletop, but also lend some special bonuses to his/her men.

They have the Leader trait mentioned above, and in addition, also have **3 traits**. Traits are explained below in detail but think of them as things that set your team apart from the average dirtsideer. Some traits are only available to your Leader.

Next, you get a **Specialist**. This can be a trusted First Mate or simply a crew member with special training. A Specialist gets **2 traits**.

The next three slots are taken by **Regulars**. They each get **1 trait**.

Instead of a Regular, you can elect to fill one of your slots with a group of *Grunts*.

Grunts are henchman, reprobates and scum used to strengthen a force. These could be faceless minions of questionable quality or civilians pressed into service.

Grunts function just like normal models except they use an 8-sided-die (d8) and only have 1 Wound. That means any Wound roll higher than a Shock result takes them Out of Action. The flip side is you get 3 for the price of one model. They all activate on one card, so only deal one card for each Grunt "group". Normally, you may only have one group of Grunts on your team, and they get only **1 trait**, which they all share.

As mentioned above, Grunts come in groups of three. They activate on the same card but may perform different actions. This gives you some tactical decisions. Do you keep them together or spread them out? This could give you some chance of piling on but remember they all act one at a time. The first Grunt into a Close Combat would have to survive the first combat before the second Grunt could come in to add the bonus to his Close Combat.

Because they function as individuals, if one of the Grunts has a condition such as "Shock" or "Reload", he must deal with that alone, but cards themselves, used to activate, are shared.

"For instance, if you had a Grunt who had Shock, and used the Queen of Spades to Activate, he, as well as his brethren, get the effect as well."

If a Seven Special Card were to be used to Activate, each Grunt gets a re-roll this turn.

Traits

Traits are a great way to add flavor to your Crew and show characteristics or special training.

A model cannot “double up” and choose the same Trait twice. You can’t pick “Ferocious” twice to give you +2 to Wound rolls from Close Combat.

Any re-rolls or extra die rolls derived from Traits do stack with any Special Cards.

Any Trait marked with “*” is only available to Leaders.

Amphibious- you take no movement penalty for moving in water and don’t have to make a task roll when moving through deep water.

Animal- you are literally an animal. You have no shooting abilities, so you may take an additional trait instead. Animals can’t make Task rolls and have a base move of 6”.

Armored- you have really tough skin that gives you the equivalent of Light Armor (see *Armor*, below) or increases existing armor by a factor.

Bloodthirsty- you must charge any enemy within your move distance. You gain a +1 on your Close Combat die roll and +1 on the Wound roll.

***Bodyguard-** you have a bodyguard. You may apply a Wound result to any friendly model within 2” instead of taking the Wound yourself.

Brute- you are a mindless monster in combat with little regard for self-preservation. As such, you have no ranged combat abilities. The trade off is you may raise your Close Combat quality die to a d12 (d10 for Grunts).

However, if you lose a Close Combat, your opponent has a +1 on Wound rolls against you. The most armor a Brute can wear is Light Armor and a Shield.

Brawler- once per turn, you may re-roll your Close Combat action.

Camouflage- you get an additional -1 to be hit while in cover.

Concealed Weapon- you may roll 2 dice and pick one result for Close Combat. If used with the 2 Special card you’ll roll 3 dice! This may only be used once per game.

***Cold Blooded-** you gain an additional +1 in Close Combat for each Shock and Wound Marker your opponent has.

Coolheaded- +1 to all Shaken recovery rolls

Cunning- re-roll any Task roll once per turn.

***Damaging Aura-** as an action place the 3” burst template centered on yourself. Any other figure under it is hit as if by Burst fire.

Deadeye- +1 to Shoot rolls.

Deadly Strike- you are an expert in finding an enemy’s weakness. When you strike an opponent, they reduce their armor roll by -1. This does stack with a weapon’s armor piercing ability. You must choose between Hand weapons or Ranged weapons for this ability.

Defensive Fighter- if you are the defender in Close Combat (i.e. you were attacked by another figure) and win, you may immediately make an attack of your own against the attacker.

Deft- reloading is reduced by 1 action (see *Weapons*, below).

Determined- you ignore Shock and Wounds penalties in Close Combat.

Dodge- if you are shot at and the shooter misses, you can immediately move 5” towards cover.

Eagle Eyed- increase a weapon's short range by 2" and long range by 4".

***Encouraging-** as an action, you can remove all Shock markers from one member of your crew within 12".

***Energy Blast-** you possess an innate ability to project beams of energy from your hands or eyes. Treat this as a Shooting action with a 6"/12" range. You do not go out of ammo on a die roll of "1", but instead you must rest a complete turn to "recharge" before you can use it again.

Fancy Footwork- win ties in Close Combat.

***Fearless-** you ignore the penalty for multiple Shock markers on Recovery rolls. *For example, if you had 3 Shock markers, your Recovery roll would still only be at a -1.*

Fearsome Appearance- any enemy that wants to attack you in Close Combat must first pass a Regular (5+) task roll. Failure means they may not attack you but may choose another action.

Ferocious- you may add +1 to Wound rolls in Close Combat.

Flurry of Blows- if a Close Combat attack only causes a Shock result, you may choose to fight a second round of combat immediately.

Flier- you have a jetpack or wings and can move over intervening terrain at no cost. You can also use your move to cover vertical heights. You are assumed to land between moves.

Gadgeteer- start each scenario with a free piece of equipment from the random Gear chart.

Horseman- your mount gets an extra Trait (see *Mounts*, below)

***Invulnerable-** re-roll one failed Recovery roll. This may only be used once per game.

Indomitable- a figure with this Trait can remove all Shock markers by spending two actions.

***Impervious-** you ignore Wound penalties on movement, attack and recovery rolls.

***Inspiring-** gain another Regular member of your Crew.

Infiltrator- once a scenario has defined starting positions, you may immediately move 10" in any direction.

Killer- you add +1 to Wound rolls when Shooting.

Large- you are bigger than most. That makes you an easy target. Enemies shooting at you get a +1 to their roll. However, your size gives you 4 Wounds instead of the normal 3, as well as a +1 to any Wound rolls you deliver in Close Combat

***Leach-** if you cause a Wound or Out of Action in Close Combat, immediately heal one wound.

***Leader-** Leaders of a Crew receive this Trait for free. They give a +1 to the die roll to any model attempting to make a roll to recover from being Shaken or Wounded and Down. The model must be within 12" and within line of sight (not blocked by terrain) of the Leader to give this "encouragement".

A natural roll of "1" still causes a model to route when attempting to remove Shock, and expire from their wounds if rolling to get up from a wound.

Leaper- you gain a bonus 2" when making a jump. A natural "1" still results in a fall.

Lightning Fast- if you are the target of a successful Shoot action, immediately make a Hard Task roll (8+). If successful, the shooter misses.

Loads of ammo- ignore first Out of Ammo roll.

Loyal- you will not voluntarily leave the playing area while another member of your Crew remains. If you roll a "1" while trying to recover from Shock, you will not leave as long as there is another member of your Crew on the table. You can still succumb to Wounds when rolling a "1" when rolling to get up after a wound.

***Lucky-** you may re-roll any die roll once a turn.

Lunge- you may conduct Close Combat from 2" away. Similar to using a polearm (see Weapons, below)

***Master of Melee-** roll 2 dice in Close Combat and pick the best result. If used with the 2 card you'll roll 3 dice!

Medic- you may heal other models. You must move next to the wounded and make a Regular (5+) Task roll. If successful, the wounded figure heals one wound. If a 1 or less is rolled, a wound is inflicted by mistake.

Mule- you are particularly good at carrying a lot of gear. You gain an extra Equipment Slot (see *Equipment*, below).

Nerves of Steel- you ignore your first Shaken result of the game.

Night Vision- you can see up to 24" at night, instead of the usual 12".

***Pet-** you have a parrot, monkey, dog or some other pet. Not only do they provide a distraction in combat (attackers have a -1 to hit in Close Combat unless they too have a pet), if you are Wounded or put Out of Action, the pet can be sacrificed instead. This is different from the Animal trait in that the player does not control the pet. It is attached to the miniature.

***Poison/Venom (only for the truly dastardly)-** if you cause a wound in Close Combat, roll on the Wound chart at the end of every turn for the Wounded model. They can only be "healed" by a Queen of Hearts or Regeneration. If a "1" is rolled by you in Close Combat, you are out of poison for the rest of the game.

Pugilist- you are skilled in the art of unarmed combat. There is no negative modifier for fighting without a weapon.

Quick- +1" on each Move Action.

Ranged Fighter- you have a d12 when it comes to Shoot actions, but a d8 for Close Combat. The d12 is used to for Shooting Wound rolls, while the d8 is used for Close Combat Wounds.

Grunts cannot be Ranged Fighters.

Ranger- ignore terrain penalties for movement and gain a +1 to Close Combat while fighting in Rough terrain.

Running Attack- after making a Close Combat attack, you may use any remaining movement to engage a new enemy.

Shape-Shifter- you have an alternate form. Create two different roster profiles for yourself. As an action, you may switch to the other profile. This lasts for the rest of the game. This is a good trait for werewolf or alien types.

Sharp Tongued- you really know how to hurl an insult. If you pass an Easy (3+) task roll, you can force an enemy in Close Combat to reroll their attack roll once per turn.

Shieldmaster- you have honed your ability to use a shield. You gain an additional +1 on armor rolls (see *Armor*, below). In addition, if you win a Close Combat you may also use your shield to push an opponent 3" away.

***Sixth Sense-** you can force an enemy to re-roll one shoot action against you a turn.

Slippery- you ignore the 1" rule for proximity to enemy figures and can leave Close Combat when activated.

Smart- add +1 to any Task roll.

Sniper- once per turn you may re-roll a Shoot roll.

Solid as a Rock- you are never pushed back or moved in Close Combat.

Soulless- You never take Shock results. But your lack of self-preservation makes you easier to hit. Anyone targeting you with a Shoot action gets a +1 to their roll. This is a great trait for robots and undead types.

Sprinter- gets 3" of free movement a turn. This is free of any other actions you take. You could take an aimed shot and still move 3".

Steady- you ignore Shock and Wounds penalties when Shooting.

Stealthy- -1 to be hit if target of Shooting. This does stack with Creeping.

Strategist- as long as you are on the field, and not Wounded and down, your Crew is dealt an extra card each turn. Once the player looks at all of his/her cards they decide which extra card to discard.

Street Fighter- you don't suffer the negative modifier for facing more than one opponent in Close Combat.

Strong- +1 to knock down doors, use a 2 Handed weapon in one hand, allowing you to use a shield or use a Team Weapon by your self.

Survivor- when checking for survival after a game (see *Campaign* rules) you add +1 to your roll.

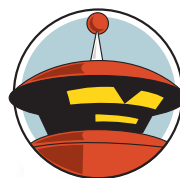

Thundering Charge- add an additional +1 to Close Combat roll if you are the attacker.

Tough as Nails- you can take up to 4 Wounds instead of 3. This doesn't stack with Large trait.

Tough as nails Grunt groups have 4 members instead of 3.

Two Fisted- you are armed with a weapon in each hand. You can elect to roll a Close Combat die for every opponent you are facing in Close Combat instead of just one. You still have a penalty to the die roll for facing multiple opponents, unless you have another trait that offset this. *For example, fighting 3 opponents, you would roll 3 dice (one for each enemy) with each die roll at -2.*

You may choose which die to assign to each enemy after seeing their rolls as well as decide which weapon is hitting each opponent.

"Gronk the Destroyer has an ax and a sword. He is fighting two lowly Troopers. He rolls a 5 and a 7 in Close Combat. He still has a -1 for being outnumbered, making his final total 4 and 6.

The Troopers both roll a 5. Gronk declares his ax is the 6, ensuring a +1 on his Wound roll, while his sword is the 5. Normally the 5 would be a losing roll, but swords give a +1 in Close Combat making it a tie."

Two Gunned- you are armed with a gun in each hand and can use Burst fire, but don't have to worry about going Out of Ammo unless at least two Shoot rolls come up 1s.

Unstoppable- once per turn, if you put your opponent "Out of Action" in Close Combat, you may immediately engage another enemy up to 5" away, or an enemy already engaged with.

Weapon Master- add a +1 to Close Combat rolls if armed with a Close Combat weapon. This is in addition to any bonuses from the weapon itself.

***Veteran-** You use a d12 for ALL rolls.

***9 Lives-** once per game, you may convert an "Out of Action" result to 1 Wound instead.

Negative Traits

The Traits listed above are **Positive Traits**. They generally help your Crew member survive the dangers of space. But, you may choose to take on a **Negative Trait** for a miniature. These are things like "Drunkard" and "Weakling". *Why would I ever choose a Negative Trait you ask?* Negative Traits let you pick another Positive trait for the miniature.

You may normally only take one Negative Trait.

Brittle - +1 to all Wound rolls made against this model.

Coward- you must make a Regular (5+) Task roll before engaging in Close Combat.

Drunkard- you start the game with one Wound already (with all the minuses associated). You can "heal" during the game as usual with a Queen of Hearts.

Green - you use a d8 for ALL rolls.

Lousy shot- -1 to hit when Shooting.

Slow- -1" to movement Actions.

Small- you are smaller than most. That makes you a hard target. Enemies shooting at you get a -1 to their roll. However, your size gives you only 2 wounds instead of the normal 3, as well as a -1 to any wound rolls you deliver in Close Combat.

Squeamish- you have a -1 to Wound rolls made against opponents when shooting.

Unlucky- each enemy model may re-roll any die roll against you once a game.

Unskilled- -1 to all Close Combat rolls.

Weakling- you can only take 2 Wounds instead of 3.

"For example, Sergeant Muldoon has chosen "Strong" and "Deadeye" as his Traits. He would like another, so he takes on the Negative Trait "Drunkard".

This frees him up to take on another Trait, but at the cost of starting every game drunk, which in game terms means he starts each scenario with a wound to represent his inebriation. Muldoon picks "Quick".

Crew Traits

After you have put together your Crew, it's time to give them a Crew Trait. This is a skill or ability the whole team benefits from. This could be special training, gear or alien ability. If a Crew member already has a Crew Trait, such as Killer, they do not get to double up.

Advanced Comms- high tech gear or some sort of hive mind means your Crew is dealt an extra card at the beginning of the round. After you have had a chance to look at the cards, pick your least favorite card to discard. You must have at least two miniatures on the table to get the bonus card.

Amphibious- your whole Crew has the Amphibious Trait .

Above Average- your Crew has no Specialist, but each Regular member gets an additional Trait. This means your Crew will normally be 4 members. This does not apply to Grunts.

Armored- your entire Crew has *Armored Hide* Trait or is equipped with Light Armor at no Equipment cost.

Bloodthirsty- your Crew is Bloodthirsty.

Camouflage- your entire Crew has the Camouflage trait.

Cool Headed- your entire Crew has the Cool Headed trait.

Deadeye- your entire Crew has the Deadeye trait.

Distress Beacon- before the game roll a d10. On a 5 or higher you are joined by 2 Regulars or 1 Specialist.

Eagle Eyed- your entire Crew has the Eagle Eyed trait.

Fearless- your entire Crew is Fearless.

Ferocious- your entire Crew has the Ferocious trait.

Fliers- your entire Crew are Fliers.

Heroes All- your Crew consists of 4 Specialists and no Leader.

Horde- your Specialist spot, and all 3 Regular spots are filled by Grunts instead.

Infiltrators- your entire Crew has the Infiltrator trait.

Killers- your entire Crew has the Killer trait.

Legendary- you start each game with 3 Renown points (see *Renown*, below)

Loyal- your entire Crew has the Loyal trait.

Quick- your whole Crew has the Quick trait.

Ranger- your Crew ignores terrain penalties.

Shapeshifters- your entire Crew are Shapeshifters.

Soulless- your entire Crew are Soulless. Robot Legion!

Special Ops- your Crew has no Leader, but instead you gain 3 Regular spots.

Stable- your Crew starts the game mounted.

Stealthy- your entire Crew has the Stealthy trait.

Tactical- you replace one of your Regulars with a Specialist.

Workshop- start the game with an additional piece of random gear.

Alien Monsters and Galactic Heroes

The Universe is full of wonders, but its also full of terrible creatures that want to kill you. To represent them on the tabletop, we've created a new category, the **Alien Monster**. They can be a giant worm, space dragon, four-armed ape, or creature from the Outer Dark.

To face them, we have **Galactic Heroes**. Galactic Heroes are the truly epic champions of legend. They are fearless defenders of freedom across the galaxy, or handsome rogues who look out for the little guy. Galactic Heroes can be the mystic Templars of the Eternal Light, or if you're looking for villains, their rivals, the Templars of Infinite Void.

Both Alien Monsters and Galactic Heroes should only be created for special scenarios and run by a third party like a Gamemaster. Or, both players control a monster or hero.

Feel free to create your own Monsters and Heroes, but here are some basic guidelines to help.

Alien monsters get **5** traits. They are allowed to use Leader only traits as well. They may also choose from these "Monsters only" traits below:

Alien Monsters Traits

Cause Fear- the monster instills fear in all that meet its gaze. As an action, the monster may use this ability on any enemy within 12".

The fear is induced similar to Close Combat. Both monster and victim roll Quality dice. If the victim rolls higher, nothing happens. They have overcome their fears and are immune to any further attempts by the monster.

If the monster rolls higher, subtract the victim's roll and use the difference on the chart below:

1-2: The victim becomes fearful and immediately pulls back one move from the attacker.

3-5: The victim becomes fearful and immediately pulls back one move from the attacker and gets a Shock marker.

6-8- The victim is paralyzed with fear and stands rooted to the spot, Helpless. The figure must be rescued before it can be activated again.*

9+: The victim is terror stricken and immediately flees from the table.

Modifiers: +2 if Fearless, -1 for every Shock or Wound marker

** The victim must make a Recovery roll to shake off the Helpless status. If another member of the victim's crew moves into contact and uses an action, the victim automatically makes their Recovery roll when they activate next. While helpless, the victim rolls no dice in Close Combat and any enemy shooting them receives a +2 to their roll.*

Extended Reach- the monster's Close Combat range is extended to 6".

Fire Breathing- this creature can breath fire (or noxious gas, or lightning). Use the large flame template.

Gaping Maw- if a miniature is knocked Out of Action in Close Combat by this monster, they are consumed. Every friendly figure within 12" must take a Shock marker.

God-like- this beast ignores Wound penalties on movement, attack and recovery rolls. In addition, treat “Out of Action” rolls as Wounds instead. It can only be destroyed after losing all its wounds.

Huge- this miniature is truly enormous. That makes them an easy target. All shooters at this model get a +2 to their roll, but a -2 on the wound roll. Their size gives them 6 wounds instead of the normal 3, as well as a +2 to any wound rolls they deliver in Close Combat. In addition, they are never pushed back from combat.

Mesmerize- the alien creature has the ability to transfix its enemies and bend them to its will. As an action the monster may use this ability on any enemy within 12”. The hypnosis is induced similar to Close Combat. Both monster and victim roll Quality dice. If the victim rolls higher, nothing happens. They have overcome the alien will of the monster and are immune to any further attempts.

If the monster rolls higher, subtract the victim’s roll and use the difference on the chart below:

1-3: Unsuccessful, but the intended victim is confused by the experience and takes a Shock Marker.

4-7: Success! The victim enters a trance like state and is now Helpless. The figure must be freed before it can be activated again.*

8+: Success! The victim is now under the monster’s will and can be activated next turn. Deal an extra card for monster.

Modifiers: +2 if Cunning, -1 for every Shock or Wound marker

** The victim must make a Recovery roll to shake off the Helpless status. If another member of the victim’s crew moves into contact and uses an action, the victim a +1 to attempts. While helpless, the victim rolls no dice in Close Combat and any enemy shooting them receives a +2 to their roll.*

Predatory: the monster is a hunter and may Creep 5” instead of the usual 3”. The monster can also start the scenario in hiding, and is not revealed until it activates.

Tunneler: this monster can bore through the ground at incredible speeds. Instead of moving above ground, this creature can move underground at the same speed. While underground it cannot be attacked. Similar to flyers, tunnelers ignore terrain penalties.

Galactic Hero Abilities

Galactic Heroes are created just like Leaders. In fact, they get the Leader trait free, and may choose any of the traits, including ones for Leaders only.

Our heroes are a cut above the rest. Because of this, they gain an advantage. If a Galactic Hero activates using a card of the red suit, (Hearts and Diamonds) they get an extra action. That's a total of three per turn!

"Dash Dixon, Hero of the Spaceways, activates using a 10 of Hearts. Since this is a red suit, he gets a bonus action. He could move 3 times, sprinting across the battlefield at blinding speed, but decides instead to aim for his first action, shoot for his second and use his third to dive behind cover. Go Dash, GO!"

If you need an ultra-baddie for your games, create a Galactic Villain. Just use the same rules for making a hero, but Villains use the black suits (Spades and Clubs) to gain their bonus action.

Psionics and Power of the Universe

Sometimes the most powerful weapon in the universe can be the mind. By harnessing the raw power of the fabric of time and space, a wielder can stop bullets and laser bolts, heal wounds and cloud enemy minds.

We call these abilities Psionics.

There are those that believe the universe is full of wonder and light. The abundance of light and warmth can be harnessed for good. These are the Templars of Eternal Light. Their Order spans the known galaxies, spreading peace, but offering battle only when needed to help the weak and subjugated. Theirs is the Path of Light.

And there are those that see the universe as a cold, brutal place that has no pity for the weak. Only through strife can a species evolve. These are the Templars of the Infinite Void. Though their order is not as large as the Light Templars, they make up for numbers with sheer brutality. Theirs is the Path of Darkness.

Players can add psionic powers to their games. They should choose whether the miniature follows the Path of Light or Dark. Both are considered Galactic Heroes or Villains, and follow the rules for them. Light powers gain an extra action per turn for activating on a red suit card, while Dark powers use the black suits.

As an action, a Templar can use a psionic power from the list below:

Braveheart- Make a Shock Recovery roll with a +1.

Crush- (Void Templars only) Make a mental attack on any one enemy within sight. This attack has a short range of 6" and a long range of 12". Ignore cover.

Deflect- If fired at from 12" or less, the Templar immediately makes a Hard (8+) Task roll and sends the shot back. If the shot was made from over 12", the Task becomes Regular (5+).

"Templar of Light, Wilja Stind is fired upon by an Imperial Shocktrooper 11" away. The shot hits, so Wilja tries to deflect the shot back at the Shock trooper.

Wilja rolls an "8" and successfully sends the blaster shot back at the faceless minion. Now he rolls to wound using the +1 Blasters have. Ouch!"

Heal- (Light Templars only) Use 1 action if in contact with another figure. Remove one wound or all Shock markers.

Leap- the Templar can add an extra +d10" to any jump.

Push- place the 3" template up to 12" away. Roll to hit any enemies under the template on a 5+. Any figures under it, receive a Shock marker and are pushed 3" back. On a roll of "1", the Templar is hit with Shock marker.

Shield- use the 3" template centered on wielder. This invisible shield counts as Hard cover until the Templar moves or attacks. The shield protects anyone inside it. A Templar could move up to some allies with his/her first action, then create the shield. This would protect them all until the Templar moves or attacks.

Telekinetic Grab- A Templar can "grab" an item up to 12" away. This requires a Hard (8+) Task roll for an item 1" x 1" in size. The item requires a roll one higher for each 1" size larger. For example, an item 3" x 3" in size requires a roll of 10+.

The item or person can be moved 5" per action. A Templar could use this power on themselves to achieve telekinetic flight, or use on an enemy to lift and drop them (see *Falling* rules above). The item is assumed to be on the ground at the end of the Templar's activation. It can't be held turn to turn.

"Dargo Vraath, Dark Templar, activates using an 7 of Spades. Because he is a Galactic Villain that activated on a black card, he uses the first of his 3 actions to telekenetically grab a 2" x 2" boulder. Being a Veteran, he rolls a 12-sided die and gets an 8. This would be a success if the boulder was smaller, but because it's 2 x 2", he needs a 9 or above.

Luckily, Dargo activated using a 7 card and gets to roll again. This time he gets a 9. Success! With his second action, he hurls the rock 5" towards his mortal enemy, Wilja Stind. Wilja is 6" from the boulder so Dargo has to use his third action to move it into contact with Wilja. BAM!

Dargo could have just charged Wilja, but that's not as dastardly."

On a roll of "1", the telekinetic grab forces the item away d10" inches.

Equipment

The members of your Crew will need weapons as well as other pieces of gear. Collectively we call this Equipment. Different armor types and weapons take up a varying number of Equipment slots, but for the most part, equipment will be either 1 or 2 slots.

The Leader has **5 Equipment slots**, the **Sergeant 4**, and the rest start with **3**. Grunts only have **2 Equipment slots**. All members of the Grunt group get the same thing.

"Dash Dixon needs some gear and weapons if he is going to go out and save the Space Princess. As Leader he gets 5 slots. He'll need a trusty Blaster Pistol

(1 slot), a Power Sword (1 slot), Light Armor (1 slot) and a Jetpack (2 slots) for a total of 5 slots of Equipment.

In this initial build part of creating your Retinue, you may elect to "trade" 2 equipment slots for a trait.

"Zort, a Regular with the Steady trait has 3 Equipment slots. His Laser pistol takes 1 of these slots. He uses his 2 other slots to trade them for the Deadeye trait."

ARMOR

Armor gives a miniature a chance to lessen damage or outright ignore it. For **Galactic Heroes**, we've broken armor down into three very broad categories: Light, Heavy and Extra Heavy armor.

After a miniature is hit, either from Shooting or Close Combat, roll a d10 to see if the armor took the impact. **Light Armor requires an 8 or more, Heavy needs a 6 or more and Extra Heavy a 5 or more.**

Light Armor covers a lot of different materials from a primitive mail shirt with a simple helmet to modern bullet proof vests. Or, it could be more something more substantial like a plasteel breastplate, but the rest of the body is relatively uncovered. Light armor is one step up from being completely unprotected. Light armor takes up a **1 Equipment slot**.

Heavy Armor would be a more complete suit of protective gear. Heavy armor takes up **2 Equipment slots**. In addition, Heavy Armor slows down the wearer by 1" per action and increases the difficulty of Task rolls by 1.

Extra Heavy Armor constitutes full powered plate armor with helmet. Only the wealthiest systems can afford to keep their troops so well equipped. Extra Heavy armor takes up **3 Equipment slots**. In addition, Extra Heavy armor slows down the wearer by 1" per action, increases the difficulty of Task rolls by 2 and the wearer cannot creep.

The trade off is Heavy Armor has a power source to drive the synthetic muscles it takes to wear it, giving the wearer the *Strong* trait.

Effects of Armor

If the armor roll is failed, roll on the Wound chart as normal.

If the armor roll passes, roll on the Wound chart, but reduce the result by one factor.

If the Wound roll result would have been Out of Action, for example, reduce this to a Wound instead. If the result was a Wound, reduce it to Shaken. If the result is Shaken, reduce it to No Effect.

If a natural "10" or higher is rolled on the attack, the attacker has found a "chink in the armor" and there can be no Armor roll.

"Crash Carson finds himself in a scrap with a spear wielding native. The spearman is wearing Light Armor, while Crash is covered in Heavy Armor.

Crash has a +1 to hit in Close Combat because of his sword. The spearman has no bonus.

Crash Carson rolls and his total is an 8, while the spearman rolls a whopping 3. This difference of 5 means Crash rolls on the Wound chart with a +2. Crash gets a 6! This would normally mean a Wound result. The spearman rolls a 9 for the Armor roll. He made it. That reduces the Wound to a Shaken result."

The *Armored* trait in conjunction with armor increases to armor by a factor. A soldier equipped with Light Armor with the *Armored* trait has a Armor roll equal to Heavy Armor. The *Armored* trait cannot boost an Armor roll higher than Extra Heavy Armor.

Wounds effect how well armor works. For each Wound a miniature has, reduce their Armor roll by -1. The Wound has not only damaged the armor but slowed down the miniature enough for them to effectively use their armor.

SHIELDS

Shields have several benefits:

Shields add another level of Armor protection. Add a +1 to any Armor roll. A miniature carrying a shield with Light armor would need to roll a 7 or higher to lessen damage, rather than an 8, for instance.

If a miniature is wearing no other armor save a simple helm, for instance, then a miniature has an armor roll of 10+. This may mean Grunts, which has a d8 Quality die, cannot benefit from an Armor roll. They just aren't trained well enough.

Shields also give a -1 modifier when being shot at. This does not stack with cover, so a soldier with a shield in the bushes is still a -1, to be hit, and not -2.

Shields help with being outnumbered. An outnumbered miniature does not receive the negative modifier for being outnumbered in Close Combat for the second enemy. A third enemy adds -1. All figures in a Close Combat still roll as usual.

A miniature cannot "Creep" while carrying a shield, nor can they use a 2-handed weapon. They may still carry a spear or polearm, but lose its special abilities (see, *Weapons* below).

A shield takes up **1 Equipment slot**.

Bucklers- When equipping a member of your Crew with a shield, you may choose to make it a buckler. Buckler are small round shields about the size of a dinner plate.

Miniatures with bucklers *can* Creep and use the buckler as a weapon with the *Two-Fisted* trait. They lose the -1 modifier that full sized shields have when being the target of shooting.

Tower Shields- Tower shields or pavises are man-sized shields used for protection for shooters. A miniature carrying a tower shield follows the usual rules for shields, except that a miniature can use an action to plant their shield. They now have a -2 to hit by shooting. In addition, any miniature behind the tower shield bearer and in base contact benefits from this cover and has a -1 to be hit by shooting. This is in effect until the tower shield bearer moves again.

WEAPONS

What's a Science Fiction game without Science Fiction weapons? The galaxy is full of wondrous technology. Much of it is good for killing things. Equipment slots for weapons are listed later on the Weapon Chart but we'll list them again here after their description for convenience.

Hand Weapons

Dagger/Knife- the most basic of weapons. Every miniature may carry a dagger for free. A miniature fighting with a dagger wins ties in Close Combat with an enemy that has no weapons. They take **no Equipment slots**.

One Handed Weapons

As the name suggests, one Handed Weapons can be used with one hand. They can be used with a shield. One handed Weapons cost **1 Slot**.

Swords- swords come in many shapes and sizes, but they all give a +1 to Close Combat rolls.

Axes- axes give no bonus to hit but do give a +1 to the roll on the Wound chart.

Club/Mace/Flail- these bludgeoning weapons have -1 to Wound Roll but add a Shock marker in addition to whatever is rolled on the wound chart.

Warhammer- warhammers are great for penetrating armor. As such, they have a slight armor piercing capability. Anyone hit by this weapon must subtract 1 from their armor roll.

Lance- a lance may only be used while mounted. It can be very powerful because not only does the mounted miniature gain a +1 for being mounted, but also a +1 if they charge using a lance.

However, If the lance wielding miniature wins the Close Combat, the lance is broken and can't be used again.

Whips- whips can be used to shock, wound or entangle. A whip wielding miniature can attack from up to 6" away. Make an opposed Close Combat roll as usual, but if the defender should win, the attacker cannot be harmed.

If the attack succeeds, roll to wound as normal, but an "Wound" result means the target has been wrapped up in the whip and is *Helpless*.

The victim must make a Recovery roll to shake off the Helpless result. If another member of the victim's crew moves into contact and uses an action, the victim automatically recovers.

A miniature can use two One Handed Weapons at once, but they must choose which weapon they are striking with. However, a miniature with the Two-Fisted trait can decide which weapon they strike with after the Close Combat roll is made. This is especially useful if fighting multiple enemies.

Two Handed Weapons

Two handed weapons deal additional damage, cleaving through armor and flesh with ease. A miniature armed with a Two Handed Weapon may not use a shield. These weapons cost **2 Slots**.

2-Handed Sword- has the +1 to Close Combat benefit of a sword and has an armor piercing (AP) capability. Anyone hit by this weapon must reduce their armor roll one level. Extra Heavy armor becomes Heavy armor, Heavy drops to Light, Light armor becomes no armor.

2-Handed Warhammer- Anyone hit by this weapon must subtract 2 from their armor roll.

2-Handed Axe- has a +1 to the Wound Roll and has an armor piercing (AP) capability as above.

Polearms- Polearms come in as many varieties as swords; halberds, glaives, and poleaxes to name a few. Polearms allow a miniature to attack from 2" away rather than the standard 1", giving them a larger area of control. If they win a round of Close Combat, they can elect to keep their opponent at a distance, but it also allows them to leave combat when they next activate, similar to the *Slippery* trait.

If they should lose the Close Combat, their opponent has closed the gap and negates the polearm's effect.

Polearms are also *Defensive Weapons* and give the user a +1 in combat if they are charged in Close Combat.

If armed with a polearm a miniature cannot use a shield.

Spears- Spears are special in that they can be used one-handed with a shield, or two handed as a polearm and no shield.

If used one handed, spears keep the Defensive Weapon bonus, but lose the benefits of a polearm.

Pikes- Pikes are most effective en-masse but a player can elect to arm miniatures with them. They count as polearms as above but are particularly effective against mounted enemies. Any enemy attacking a pike armed miniature lose ALL their bonuses in Close Combat (+1 for Mounted, +1 for Charge, +1 Lance).

Power Weapons- Power Weapons can turn ordinary weapons into weapons of legend. Metal cutting edges are replaced by laser, plasma energy or rotating cutting chains.

Use the regular rules for each weapon type, but the weapons become Deadly (*see below*).

For example, if you wanted a Powerfist, treat it as a club, with the -1 on the Wound roll, but add an additional Shock marker. If you should roll a 10 or more on the Close Combat roll, it automatically puts the target Out of Action.

Making a weapon a Powered Weapon adds an **additional Equipment slot**.

Primitive Weapons

We've included the above "primitive" weapons because we want the rules to be broad enough that Players can go to any world they can imagine. This could be a primitive backwater world where the natives haven't evolved much above cave people to high tech planets where futuristic armor piercing crossbows reign supreme and courtly gentlemen still wield swords. Or, it could simply be good having a trusty club around to bash a few heads during a boarding action.

RANGED WEAPONS

Primitive ranged weapons must be reloaded after each shot. How many actions this requires is based on the weapon. Each entry lists the number of actions required before a ranged weapon can be used again. Ranged weapons are **2 Equipment slots** unless mentioned otherwise.

Bow- Bows have a short range of 9" and a long range of 18". They only take **1 action** to reload.

Crossbow- crossbows have a short range of 9" and a long range of 18". They gain a +1 on the Wound Roll at Short range. Crossbows take **2 consecutive actions** to reload.

Warbow/Longbow- longbows have a short range of 12" and a long range of 24". They only take **1 action** to reload, but any miniatures equipped with one need the *Strong* trait to use it.

Sling- slings have a short range of 6" and a long range of 12'. Their main benefit is the ignore the negative effect of rolling a "1". Slings only take **1 action** to reload. Slings only take up **1 Equipment slot**.

Throwing knives, axes or javelins- these weapons have a short range of 6" and a long range of 12'. They cost no actions to reload, so a miniature could potentially throw a weapon with each action, however, if a "1" or "2" is rolled, miniature has no more thrown weapons. Throwing weapons only take up **1 Equipment slot**.

Auto Weapons

This category covers a vast quantity of magazine or belt fed weapons capable of spewing projectiles at a high rate. These can be mass produced, high tech, magnetic pulse rifles or home made, back world bullet throwers.

Auto Pistols- Auto Pistols are extremely common. Most people can't afford a flashy Laser or Blaster pistol. Auto Pistols have a short range of 6" and a long range of 12". Auto Pistols take **1 Equipment slot**.

Submachine Guns- have the range and ammunition of a pistol, but can use Burst Fire.

Auto Rifles- Auto Rifles have a short range of 12" and a long range of 24", and may Burst Fire. Auto rifles are probably the most ubiquitous weapon found in the cosmos. Every planet seems to produce some form of rapid fire rifle.

Machine Guns- are the heaviest of the auto guns. They require a *Team* to use. They have a short range of 18" and a long range of 36"

They may use Burst Fire, but because of their high capacity magazines, they may use Burst fire at Long range, but we give them the Ammo Hog trait.

Blasters are high energy weapons. Unlike lasers, which focus this energy into a tight beam, blasters get their name from the "blast" unleashed. All Blasters are *Inaccurate*, giving a **+1 to the Wound roll**. Blasters come in Pistol, Rifle and Heavy Blaster forms.

Blaster Pistols- Blaster pistols are preferred by heroes and rogues alike for their durability, and for the cool noise they make when fired. Blaster Pistols have a short range of 6" and a long range of 12'.

Blaster Rifles- Blaster Rifles are favored by oppressive regimes across the galaxy. Their menacing size and destructive capabilities make them ideal for faceless minions of dark overlords. Blaster rifles have a short range of 12' and a long range of 24".

Heavy Blasters- These are terrifying weapons. Their huge barrels seem to disgorge death indiscriminately around the battlefield, leaving gaping holes in the terrain.

Heavy Blasters have a short range of 18" and a long range of 48" and take **3 Equipment slots**.

A Crew member must have the *Strong* trait to carry a Heavy Blaster alone. Otherwise, Heavy Blasters need a Team to carry and fire (see *Teams*, below).

Grenades come in all shapes and sizes, but usually consist of a hand held explosive device that can be activated then thrown. Grenades are Blast weapons and use the 3" Blast template. Rather than a fixed range, grenades can be thrown a d10 plus 3".

First mark the area (you can use a die) where the player would like to throw it.

Next, roll d10 for the distance the grenade flies, and add 3". Measure from the model throwing to the target marker out to the distance rolled. This is where to center the template.

Any models that are at least half under the template are hit by the blast.

When rolling to hit, a roll of "1" causes the grenade to detonate in the model's hand. BOOM! Roll with a +1 on the Wound chart. Any friendly models under the template are hit as usual.

A pair of grenades take **1 Equipment slot**.

Frag grenades- these grenades send sharp chunks of metal in every direction. Use the rules as is, from above. On a natural roll of "10" or above on the shooting roll, the shot is particularly dramatic. All figures within 2" of the blast template take a Shock marker.

Goo grenades- or webbers, cover the area in a super sticky goo. Any miniature under the blast template must make a Hard Task roll (8+). Strong figures can add +2 to this roll. Miniatures who make the roll are unaffected. Miniatures that fail are stuck, helpless.

The victim must pass a Hard Task to escape. If another member of the victim's crew moves into contact and uses an action, the victim rolls again and adds +1.

While trapped, the victim rolls no dice in Close Combat and any enemy shooting them receives a +2 to their roll.

Shock grenades- these grenades emit a concentrated electrical charge. Ignore the "Out of Action" result on the Wound chart, but add an additional Shock marker. Robots take an additional +1 to the Wound chart roll.

Smoke grenades- smokers are useful for creating a line-of-sight blocking area the size of the 5" template. Roll at the end of the turn. On a d10 roll of 6+ the smoke dissipates.

Stun grenades- stunners send out a shock wave of sound of bright light. Any model under the template receives 2 shock markers. Soulless troops are unaffected.

Grenade Launchers- grenade launchers allow you to send grenades a longer distance. Instead of using the throwing rules above, grenade launchers have a 10" short range, and a 20" long range. They follow the *Blast* rules, below.

Lasers emit an intense ray of light that cuts through most materials easily. Due to their complexity, Lasers are extremely rare. Lasers come in Pistol, Rifle and Heavy Laser forms. Lasers are Ammo Hogs. They are also referred to as Rayguns or Beamers.

Laser Pistols- Laser Pistols have a short range of 8" and a long range of 16" and take **1 Equipment slot**. In addition, they have armor penetration (AP) value of 1.

Laser Rifles- These have a short range of 16" and a long range of 32". Like their smaller brethren, they have armor penetration (AP) value of 1.

Heavy Lasers- Heavy Lasers are the top of the food chain when it comes to destruction. These killers are usually mounted on heavy warbots and tanks, but have been known to show up being lugged around by large mutants or genetically enhance super soldiers.

Heavy Lasers have a short range of 24" and a long range of 48". They have armor penetration value (AP) of 2, meaning they ignore both Heavy and Light armor.

Heavy Lasers use the 3" Burst template at short range and take **3 Equipment slots**.

A Crew member must have the *Strong* trait to carry a Heavy Laser alone. Otherwise, Heavy Lasers need a Team to carry and fire (see *Teams*, below).

Mazers use focused microwave energy. A mazer's invisible beams ignore cover and one level of armor (AP), cooking a target from the inside out. Or at least giving them a nasty radiation burn.

Mazer guns- Mazers have a short range of 8" and long range of 16". They are also Ammo Hogs.

Rocket Launchers- Rocket launchers fire rocket-propelled explosive projectiles. They can be portable, shoulder fired launchers, or larger vehicle mounted. We're just concerning ourselves with man (or alien) portable ones.

Rocket Launchers are Blast weapons with Limited Ammo, and have a short range of 12" and a long range of 24". They use the 5" Blast template. Only *Specialists* can carry them.

Shotguns- Shotguns are capable of firing pellets or flechettes in a wide area. Shotguns have a short range of 6" and a long range of 12", and do Splash damage.

Sniper Rifles- these are essentially regular rifles, but have advanced optics and balance. For this reason, we give them a short range of 16" and a long range of 32". To get the best results from a sniper rifle only *Specialists* can carry them.

Stunners- Stunners come in a variety of shapes and sizes. Some stunners use electrified wires, some emit a low level electromagnetic burst or sonic blast. Stunners ignore armor values on human sized or smaller creatures. Living creatures hit by a stunner roll at a -1 on the Wound Chart while Soulless troops have a +1 on the Wound Chart.

Stunners have a short range of 6" and a long range of 12".

Flamers- these weapons use the teardrop template and follow the rules for Burst weapons, except the template is placed with the thinner end at the base of the shooter. The template has short and long range rings. Those targets within short range have a +1 on Wound rolls.

Flamers have *Limited Ammo*, and require a *Specialist* to use them.

Weapons

Name	Range Short/Long	Equipment Slots	Notes
Dagger/Knife	-	0	Wins Ties vs unarmed Opponents
Sword	-	1	+1 Close Combat Rolls
Axe	-	1	+1 To Wound Rolls
Club/Mace/Flail	-	1	Additional Shock Marker added to Wound roll
Warhammer	-	1	-1 from Armor roll
Lance	-	1	+1 Close Combat Rolls if Mounted
2 Handed Sword	-	2	+1 Close Combat Rolls, *AP
2 Handed Axe	-	2	+1 To Wound Rolls, *AP
2 Handed Warhammer	-	2	-2 from Armor roll
Polearm	-	2	Polearm
Spear	-	2	Polearm unless used 1 handed
Pike	-	2	Polearm
Bow	9"/18"	2	Reload: 1
Crossbow	9"/18"	2	Reload: 2, +1 Wound at Short Range
Warbow/Longbow	12"/24"	2	Must be <i>Strong</i> to Use
Sling	6"/12"	1	Reload: 1
Throwing Knives/Axes/			
Javelin	6"/12"	1	Out of weapon on roll of 1 or 2
Auto Pistol	6/12"	1	-
Auto Rifle	6/12"	2	Burst
Submachine Gun	12/24"	2	Burst
Machine Gun	18/36"	3	Burst, Ammo Hog, Team
Blaster Pistol	6/12"	1	Inaccurate
Blaster Rifle	12/24"	2	Inaccurate
Heavy Blaster	18/36"	3	Inaccurate, Team
Grenade	d10 +3"	1	Blast 3
Grenade Launcher	10/20"	2	Blast 3
Laser Pistol	8/16"	1	AP 1, Ammo Hog
Laser Rifle	16/32"	2	AP 1, Ammo Hog
Heavy Laser	24/48"	3	AP 2, Ammo Hog, Burst, Team
Mazer	8/16"	2	AP1, Ammo Hog, Ignore Cover
Rocket Launcher	12/24"	2	Blast 5, Limited Ammo, Specialist
Shotgun	6/12"	2	Splash
Sniper Rifle	16/32"	2	Specialist
Stunner	6/12"	2	see page 42 for Stunners
Flamer	-	2	Flame Template

Weapon Properties

Ammo Hog- these weapons use an extraordinary amount of energy or bullets. They go “Out of Ammo” on a Shoot roll of 1 or 2. This also means it is easier to go “Out of Ammo” if using Burst fire (see below).

AP- Armor Piercing weapons reduce the armor of enemy’s armor roll one level. Light armor becomes no armor. Heavy drops to Light, etc.

Blast- weapons with explosive power like grenades and some heavy weapons will use a Blast template. A weapon with Blast capabilities will say Blast 3 or Blast 5, referring to the diameter size of the template. Templates can be placed anywhere within the weapons range, but must be centered on a miniature OR area within line of sight of the shooter. Mark this target point with a die or similar marker. Roll to hit as normal at short or long range.

Any figures that is at least half under the template is hit by the blast. Roll on the Wound chart for each.

Notice both the templates have two rings. The center of the template is marked +1. This is added to the Wound roll.

If the shot misses, deviate the shot from the target point by rolling a d10. The “point” of the d10 becomes your direction and the number is the distance in inches. If the shot was long range, double the distance shown on die.

On a natural roll of “10” or above on the Shoot roll, the shot is particularly dramatic. All figures within 2” of the blast template take a Shock marker.

If the shooter rolls a natural “1”, roll again. On a roll of 6 or higher, the live round is lodged in the barrel and mark them with an additional Reload marker. If the second roll is 1-5, BOOM! The round detonates with the template centered on the shooter.

Burst Fire- Most automatic weapons, and some energy weapons, are capable of spraying an area with large amounts of fire. Players have the option of using Burst Fire if the target is within short range (or long for some heavy weapons). Use the 3” blast template but ignore the wound modifiers on the template. Roll to hit any miniature that is at least half covered by the template. These shots are at a -1 to hit due to the inaccuracy of spraying an area.

When rolling to hit, if the number rolled is equal to or less than the number of targets under the template, the weapon is *Out of Ammo*.

“Captain Hazzard has a squad of alien Ornks in his sight. He lets rip with his autorifle using its Burst ability. Once the template is placed, he will have a chance to hit three of them.”

At short range, he would normally need a 5 or better to hit. But because it’s a burst, he needs 6 or better.

He rolls to hit each getting a 7, 6 and a 3. The 7 and 6 hit. The 3 however, not only misses but causes the autorifle to be “Out of Ammo”. There were three targets, so a 1,2 or 3 causes an “Out of Ammo”. Now he rolls for Wounds on the two he did hit.”

Deadly- Deadly weapons are so good at killing, they automatically put their targets “Out of Action” on a natural die attack roll of 10 or above. No need for Wound rolls. Laser swords, chain swords and axes and some high energy weapons are Deadly.

Inaccurate- these weapons are either unwieldy due to their size or put out so much power, they’ll find it hard to hit to the broad side of a Boraxian Gargant. Inaccurate weapons give a minus -1 to the user’s Shoot roll, but deliver a +1 to any Wound rolls.

Limited Ammo- if you roll an “Out of Ammo” result when shooting, this weapon is out of ammo for the rest of the game.

Polearm- Polearms allow a miniature to attack from 2” away rather than the standard 1”. Polearms are also Defensive Weapons and give the user a +1 in combat if they are charged in Close Combat. If armed with a polearm a miniature cannot use a shield.

Reload- weapons listed with Reload must be reloaded after each use. The number listed is the number of consecutive actions that must be used to reload the weapon. *For example, a bow has a Reload 1. This means the archer can shoot with one action, then use the second action to reload and be ready next turn. Meanwhile, a crossbow requires 2 actions. They can can Shoot but then need a full turn of 2 actions to reload.*

Specialist- Only a Specialist or a Leader can use this weapon.

Splash- If the weapon hits, any miniature within 1” of the target will also be rolled to hit (friend or foe). At Long range, this splatter increases to 2”, but extra targets are hit at a -1 modifier as well as a -1 on the Wound roll.

Team- These weapons require a team to use. See *Teams*, below.

Weapon Teams

Some weapons are either too large or heavy for one individual to comfortably use. We give these weapons the *Team* property.

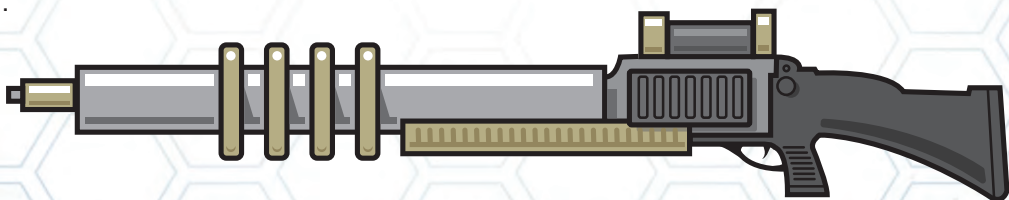

A team usually consists of at least two miniatures, a gunner and a loader. The two miniatures move together as one. Therefore, they are only dealt one card for both of them. The size and weight of the weapon slows the team down to 4” per action. And it takes two full, uninterrupted actions to set up a team weapon before it can fire.

Once set up, the weapon functions like any other, but it requires a separate action to break down a team weapon before it can move again.

If a team is fired on, randomize which one is hit, unless they are the target of a burst or blast.

If the team is charged in Close Combat, the attacker must fight both using the Multiple Combatants rule (see page 13).

If the team is reduced to one miniature, it is no longer a team. The weapon can still be fired, but cannot be moved. A new member from your crew can be moved into contact with the weapon to form a new team. It is assumed all members of your crew have been cross-trained on the weapon.

Other Gear

Gear is the term we're using to describe all the wondrously futuristic equipment your Crew can acquire or even start with.

If you need to *randomly* generate a Gear Item for your scenario, you can roll on the pages below. Simply roll two 10-sided-dice of different colors. One color acts as your "tens" while the other acts as your "ones". Thus, a roll of 6 and 5 is read as 65, while a 0 and a 3 is read as 3.

Crew members can start with any Gear as long as they have slots available. If Gear is acquired later, like in a campaign, a Crew member can carry an additional amount of Gear equal to their starting Equipment slots.

01-04 Anti Gravity Harness- this harness gives both the *Strong* and *Mule* traits to the wearer. It takes up **1 Equipment slot**.

05-08 Autonomous Turret- autonomous turrets can be placed on the battlefield, and act independently to provide cover fire. A miniature carrying one must use both actions to set up the turret. Once placed, the turret has a 360 degree fire arc, but cannot be moved again for the duration of the game. It has the range and striking power of the weapon mounted on it. This can be a Machine Gun, Heavy Blaster or Heavy Laser.

Autonomous turrets have Limited Ammo and can be disabled by an enemy contacting it in Close Combat.

The turrets fire at the beginning of the turn, before players activate. If multiple turrets are in play, players can dice off to see which fires first.

Turrets take **3 Equipment slots**.

09-12 Belt Shield- Belt Shields create a an almost invisible forcefield around the Crew member. The wearer is treated as always being in Light Cover. Belt Shields take **1 Equipment slot**.

15-16 Chameleon Cloak- donning this cloak as an action lets the wearer be treated as hidden even if the are not in cover.. The cloak takes **1 Equipment slot**.

17-20 Combat Drugs- these "medications" allow a Crew member to spend an action to remove all Shock, either from themselves or another miniature in contact. This functions like a Queen of Spades Special card. It has one use per game. They take **1 Equipment slot**.

21-24 Comms Jammers- Jammers negate the use of *Advanced Comms* trait by the enemy. Comms Jammers take **1 Equipment slot**.

25-28 Drones- Drones are small hovering, remote controlled devices that allow the controlling side to have line of sight, even though they might not have it themselves. They see what the drone sees.

Miniatures armed with grenades or grenade launchers may use them to target enemies they can't normally see.

If you buy or acquire a drone, roll a d10. On a 9 or 10, the drone is also armed with an autori-fle.

Drones have the *Small* and *Flier* trait, and are *Soulless*.

Drones move at the beginning of the turn, before players activate and take **2 Equipment slots**.

29-32 Exoskeleton- Exoskeletons are metal frames that allow Crew members to have increased strength and speed. A miniature with an exoskeleton gets the *Strong* and *Quick* Traits.

An Exoskeleton takes **1 Equipment slot**.

33-36 Extra Ammo- this allows you to ignore the first Out of Ammo result for the low, low price of **1 Equipment slot**.

37-40 Holo-Suit- Holo-suits cover their wearer in a shimmering holographic blur, making them almost invisible. Enemies receive a -1 on their Shoot rolls to target holo-suit wearers. This modifier stacks with cover, allowing a holo-suit in cover to act as a -2 modifier to Shoot rolls.

If a miniature wearing a holo-suit is wounded, roll a die. On a "1" the holo-suit is too damaged to work for the rest of the game.

A Holo Suit takes **2 Equipment slots**.

41-44 Jet Pack- Jet packs allow Crew members to have the *Flier* trait. Roll after each flight. On a "1" the jet pack is out of fuel for the rest of the game.

A Jet pack takes **2 Equipment slots**.

45-48 Medi Pack- Medi-packs allow a miniature to spend an action to remove one wound, either from themselves or another miniature in contact. This functions like a Queen of Hearts Special card. It has one use per game and takes up **1 Equipment slot**.

49-52 Micro Launcher- Micro Launchers allow a model to have a grenade launcher attached to their primary ranged weapon. They cost **1 Equipment slot**.

53-56 Nightvision Goggles- these high tech goggles allow the Crew member to have the *Nightvision* trait. Nightvision Goggles cost **1 Equipment slot**.

57-60 Optical Sights- these special sights allow the wearer to gain the Deadeye trait for **1 Equipment slot**.

61-64 Phase Suit- Phase Suits allow a Crew member to pass through a solid wall or object by temporarily entering another dimension. They become solid as soon as they pass through. Because of the strain on mind and body, roll a d10 each time the phase suit is used. On roll of 1, roll again on the Wound chart.

Phase Suits cost **1 Equipment slot**.

65-68 Power Fists- These are large gauntlets that amplify a Crew member's strength and punching power. The Power Fist adds a +1 to hit in Close Combat and a +1 to the Wound roll.

Power Fists take **2 Equipment slots**.

69-72 Psionic Helmets- Psionic Helmets give the wearer **one** of the abilities listed in Psionics section and cost **1 Equipment slot**.

73-76 Shock Screen- this device gives the owner the *Damaging Aura* trait and takes **1 Equipment slot**.

77-80 Suction Boots- Suction Boots or Spider Boots allow a Crew member to move up vertical surfaces like they were covering regular ground. The boots take **1 Equipment slot**.

81-84 Teleporter Belt- Teleporter Belts can instantaneously move the wearer anywhere on the battlefield by using an action to activate it.

Pick a spot somewhere on the battlefield the user has line of sight to. Place a marker or die there and roll a d10.

The “point” of the d10 shows the direction the user deviates from the intended destination, and number shown on the die is the distance in inches. The farther the user “jumps”, the more deviation. If the user attempts a teleport over 24” double the deviation distance shown on the die.

If the new location puts the miniature into a solid piece of terrain like wall, place the miniature next to the terrain and roll on the Wound chart.

A Teleporter Belt takes **1 Equipment slot**.

85-88 Void Bag- this seemingly bottomless sack contains a miniaturized Black Hole that allows a miniature to carry 20 Equipment Slots worth of equipment. This does not mean the miniature can wear all this equipment at once. They are still limited to what a character of their rank can be equipped with.

Using an action, a character can pull out or put away a piece of equipment from the bag. The bag itself takes up **1 Equipment slot**.

89-95 X Weapon- X Weapons are highly experimental weapons that give the user a +1 to Shoot or Close Combat rolls. Roll a d10 to find out what the weapon is:

- 1- Ax
- 2- Sword
- 3- Auto Pistol
- 4- Auto Rifle
- 5- Laser Pistol
- 6- Laser Rifle
- 7- Blaster Pistol
- 8- Blaster Rifle
- 9- Mace
- 10- Knife

X Weapons take up 1 extra slot than Equipment slots as the same ordinary weapon. An X Sword, for example, is 2 slots.

96-100 Choose from the list.

Mounts

Mounts aren't dealt their own card at the beginning of the turn. They are merely modes of transport. You are basically just giving a miniature extra movement by being mounted. A mount costs **2 Equipment slots**.

Most mounts can carry two riders.

It takes an action to mount or dismount.

The basic move per action for mounts is 8". They may turn freely just as dismounted miniatures do.

There is a -1 to shoot riders. If hit is scored, roll a d10. On a 8+ the mount is hit instead. Mounts are Out of Action if hit, unless there is Trait that overrides this. If there is more than one rider, randomly determine who is hit.

A rider Shaken by Shooting falls back 8" away from the attack towards cover, if possible. A Wounded rider is shot from the saddle and tumbles off. The mount is now loose. Throw a d10. The direction of the point is the where the mount moves, and the number is the distance in inches.

If there is a second rider, they may take control of the mount by passing a Hard Task roll. Failure means the rider is thrown from the mount with a Shock marker.

If the player has a separate horse, the riderless mount will wander d10" in a random direction at the end of every turn.

A mounted miniature gains a +1 in Close Combat versus dismounted miniatures. They gain an additional +1 if they charge into Close Combat.

Mounted troops that win a Close Combat may elect to ride past their opponent with any unused movement. They cannot engage in another Close Combat unless they have a Trait that allows it (*Running Attack* or *Unstoppable*).

Mounted troops that are Wounded from Close Combat are knocked from their mount. Scatter the mount as above if one is available.

Due to their size, mounted troops may disengage from Close Combat and can ignore the 1" engagement rule, even if their opponent is also mounted.

Mounts may be given Traits just like troops. You may pick one trait for your mounts.

Agile- additional -1 if targeted by Shooting.

Armored- the mount is not taken "Out of Action" by the first hit.

Charger- additional +1 to Close Combat rolls.

Ferocious- add a +1 to Close Combat Wound rolls

Fire Breather- your mount can lay down a flame template instead of moving. This can be fire, spines or electrical discharge. It's up to you!

Flier- your mount can fly. Ignore terrain effects.

Large- mount only moves 6" per Action but can carry 4 crew members.

Loyal- your mount will not wander if you are knocked from your mount. Instead, the horse will stay within 1" of the rider.

Sprinter- your mount moves 10" per action.

Steady- You don't have the -1 for Shooting from a mount.

Sample Crews

Leader: Capt. Bobo

Traits: Leader (Free), Dodge, Invulnerable, Veteran

Equipment: Auto Pistol, Auto Rifle, Light Armor, Frag Grenade

Specialist: KLR-99

Traits: Soulless, Deadeye

Equipment: Flamer, Light Armor

Regular 1: Scales

Traits: Indomitable

Equipment: Auto Rifle, Light Armor

Regular 2: Glug

Traits: Amphibious

Equipment: Auto Pistol, Heavy Armor

Regular 3: Buzz

Traits: Killer

Equipment: Auto Rifle, Light Armor

Crew Trait: Advanced Comms

Specialist: Sgt. Hazzard

Traits: Dodge, Invulnerable,

Equipment: Auto Rifle, Heavy Armor

Specialist: Brother Octavious

Traits: Lucky, Deadeye

Equipment: Auto Pistol, Frag Grenade, Heavy Armor

Specialist: Brother Lament

Traits: Brawler, Ferocious

Equipment: Auto Pistol, Sword, Heavy Armor

Specialist: Brother Gunther

Traits: Steady, Determined

Equipment: Auto Rifle, Heavy Armor

Crew Trait: Heroes All

Campaign

In the campaign, you will play a series of scenarios. You will travel between planets and stars, dealing with random encounters, fighting foes for the good of the Galaxy or your own enrichment.

Over the course of the campaign, some of your Crew will gain in experience, skill and equipment while others may be seriously hurt or even killed.

The campaign has no predetermined end, although you may want it to culminate in a Final Episode (see *below*). Or you can simply play to a pre-determined Renown total.

Your Crew may be forced to disband due to their dismal misfortune, while others will become heroes of old.

RENOWN

Renown represents your Crew's reputation, good or bad, around the galaxy. Are you hardened criminals whose very name inspires terror, or laughable misfits who are jeered by the locals?

Renown points (RPs) are gained by playing scenarios or because of traits. RPs can be spent to replace or improve members, buy new equipment, or used as rerolls on a 1 to 1 basis during a game. They can also be stored up to go on to the Final Episode.

RPs don't have to be spent right away and can be saved for later.

Spending Renown

If you need to replace a dead member of the Crew, you must spend the renown below:

Specialists cost 5 RPs
Regulars 4RPs
and Grunts cost 3 RP

You will notice there is no listing of cost for a Leader. If your Leader is slain, there are 2 options. Start again with a new Crew or promote your Specialist. See below.

There is no maximum size to your Crew, but you'll find it's hard to keep track of more than 10 miniatures.

If you want to use RPs to purchase an additional trait for a Crew member, it costs double what the original cost was. *For example, if you want to give a favorite Regular a new trait, it will cost 8 RPs, 10 for a Specialist and 14 for a Leader.*

No Crew member can have more than 5 Traits

Renown can also be spent during a game as a reroll. Simply announce you are using a Renown Point as a reroll. Think of this as spending a little of your luck, reputation or will to influence the outcome. This can only be done once per turn. You can't reroll a reroll.

Promotion

Instead of replacing a dead Crew member, you can promote an existing member. You can promote your Specialist to Leader by spending **4 Renown**. This gives him or her the Leader Trait automatically.

A Regular can be promoted to a vacant Specialist spot for 2 Renown, but you only do so if there is an opening.

POST GAME

If you want to see what happens after the game or decide to play a campaign using **Galactic Heroes**, there's a good chance you'll lose a few soldiers along the way.

The smoke has cleared, and bodies litter the ground. Now what?

Roll d10 for each model in your retinue that is wounded or knocked Out of Action and see the chart below.

Roll	Result
1-5	"Just winged me"
6-7	"It's not so bad"
8	"Call the Medic"
9	"Shot full of holes"
10	"It's the airlock for you"

Modifiers to the roll:

+1 *If model was on losing side of scenario*

+1 *If model was "Out of Action"*

Results:

"Just winged me" – Crew member makes a full recovery and is ready to fight next game!

"It's not so bad"- Crew member must miss the next game but is ready the following game.

"Call the Medic"- The Crew member must miss the next game. When they return the following game, they must start the game as if already Wounded, i.e. -1 to all rolls and moves. As with any Wound, a special Queen of Hearts card can remove the wound.

"Shot full of holes" - Crew member must miss the next game but is ready the following game. However, the miniature is permanently damaged. The Crew member must choose a Negative Trait. If the he/she already has 2 Negative Traits, ignore this part of the result, but the miniature must start the game as Wounded, above.

"It's the airlock for you" - The Crew member is dead. Start looking for a replacement.

As you can see, it pays to be the winner when it comes to your Crew's survival.

Luck (Optional)

Have a favorite Crew member that just got killed? Have no fear.

After you check the survival of each miniature, you may select one of them. Even if they suffered a *"It's the Airlock for you"* result, they have managed to survive.

This miniature took the bullet to their lucky charm instead, or it hit their whiskey flask, or they're just protected by the Light of the Universe. Explain it however you want. This guy just got lucky. They can play the next game as if nothing happened.

Guns for Hire

If you start a scenario outnumbered by 3 or more models, you may bolster your numbers by adding a group of Grunts armed with pistols. These are down on their luck mercenaries or just street dregs. Either way they only stay for this scenario and are gone.

Useless Crews

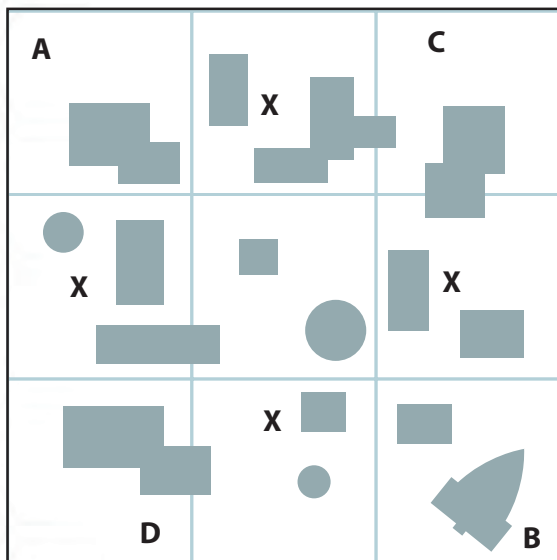

There may come a time in your campaign where one crew is just too chewed up, broken or dead to continue. At any point during the campaign you may throw away your crew and start fresh.

Create your new crew the same way as the old, but there is one penalty. No new crew, started after the campaign starts, may be created with any Traits, other than the Leader. They can pick up traits later by spending Renown.

Scenarios

These Aren't the Bots You're Looking For 2 - 4 Players 3' x 3' Playing Area

The plans for the Empire's new Doom Moon have been stolen. The plans are on a robot that's been captured by rebel forces. The rebels must cross a notoriously villainous desert town to get to their waiting ship. If that wasn't hard enough, the plans are in fragments. The rebels only have half of the plans. The other half is being carried by another robot somewhere in town. But which one?

Set Up

The table should feature mostly buildings. If you your collection doesn't have buildings, feel free to use what you do have, as long as there is lots of cover.

The Rebels enter at "A" and must cross to the waiting ship at "B". If you don't have a ship, just have them exit the table.

The Imperial forces enter from "C" and "D".

The extra robots start at the "X" spots.

Forces

Both sides should have a standard Crew.

The rebel Crew should contain the robot with half the plans.

Special Rules

The Robot- The rebel player(s) must assign a miniature to escort the robot they have. The robot moves with the assigned miniature. It will move when he/she does and stay within 1". The rebel player may elect to leave the robot unattended, in which case the robot will move randomly when the other robots do (see below).

To take possession of an unescorted robot, a miniature must contact it and spend an action.

The Joker- This scenario requires the Joker to be shuffled into the deck. It functions just like an Ace of the lowest suit, and when played, it will activate the below:

Random robot movement- When a Joker is played after the miniature activates, roll a d10 for each robot on the table. The direction the die points is the direction the robot moves, and the number is the distance in inches. If the path would take the robot off the table or into a building or wall, just have it stop.

Which robot has the plans?- When a miniature contacts a robot it must spend an action. Next, roll a d10. If a "10" is rolled, this is the robot you're looking for.

If a 10 is not rolled, add +1 to the next roll for the next robot. If no 10s are rolled when the last robot is reached, it is obviously the one containing the second half of the plans.

Victory

The rebels win if they can get both robots to the ship at location B and receive 5 Renown Points (RPs). If they are only able to get one robot to the ship, they only receive 1 RP.

The Imperial forces must capture both robots to win. They cannot destroy the robots to win. The Emperor wants to know how the plans were stolen and needs the robots intact. The Empire gets 5 RP if they are both recovered and moved to either location C or D.

For purposes of the scenario, the waiting spaceship cannot be destroyed.

Variations- If you don't have the right terrain or miniatures, you can substitute the robots for diplomats or technicians.

The game can be scaled up to 4 or more players, just make sure the forces are balanced. You may want to increase the table size to 4'x4' after 4 players.

You can also place a time limit on the game. The ship needs take off before Imperial ships blockade the planet.

At the end of turn 6, roll a d10. If the die result 6 or below, the ship had to take off. If the roll is 7 or more, that becomes the last turn number for the game.

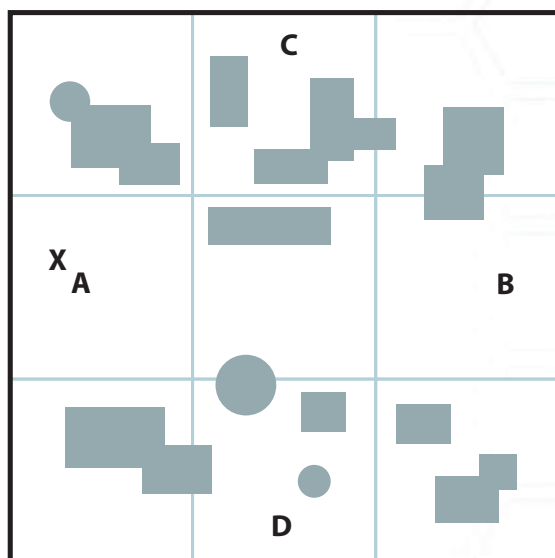

A Hive of Scum and Villainy

4 Players

3' x 3' Playing Area

A group of smugglers has stolen a shipment of hyperfuel from the Empire. They plan to sell it to a group of pirates at a settlement on a small, dusty, backwater planet.

Things should go smoothly, but they are unaware the Empire and some down on their luck rebels are about to interfere.

Set Up

The table should feature mostly buildings. If you your collection doesn't have buildings, feel free to use what you do have, as long as there is lots of cover.

The Smugglers enter at "A" while the pirates start at "B".

The Imperial forces enter from "C" and the rebels start at "D".

Forces

This scenario uses standard Crews.

The smugglers start with a hover sledge (or wagon, or truck, etc.) carrying the hyper fuel, which can be moved a maximum of 6" a turn.

Special Rules

Sand Storm- Shuffle one of the Jokers into the deck. When a Joker is played, after the miniature activates, one of the planet's notorious sand storms hits. It will last until a Joker is played again.

While a storm is in effect, all line of sight is reduced to 12". All weapon ranges are halved. For example, a pistol would go from 6" short range, to 3" short range.

The Locals- The denizens of the town are used to the occasional sound of blaster fire. What they don't like is when it gets in the way of their business.

Before the shooting starts, Crew members may enter building freely. After the first weapon is fired, Crew entering a new building must take a close range blaster shot. This can be rolled by the player moving the miniature or another. This shot represents the locals defending their turf.

After the shot has been resolved, the local disappears out back, and the building is clear to enter for the rest of the game.

Strafing Run- At the end of each turn that a sand storm is NOT in effect, the Imperial player may call in air strike from star-carrier based fighters waiting in orbit.

Simply place the 5" blast template anywhere on the table. Next roll a d10. The direction the die points is the direction the blast template moves, and the number is the distance in inches.

Roll to wound any miniatures caught under the template.

Victory

The smugglers must successfully complete their deal with the pirates. This involves getting the fuel to the pirates and making the exchange of credits. A smugglers must get the fuel into contact with a pirate, or a rebel and spend 2 actions to make the exchange. Then, it's up to the buyers to get the fuel off the table edge they entered.

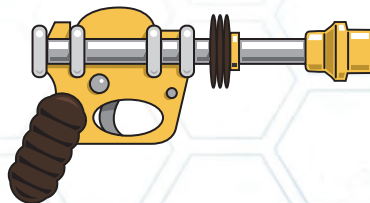

The smugglers get **5 Renown Points** for getting the exchange done. The pirates or rebels get the same for leaving the table edge with their ill gotten gains.

The Imperial crew wants the fuel back before the higher command finds it has gone missing and heads start to roll. They receive **5 RPs** for recovering the fuel.

For purposes of the scenario, the fuel cannot be targeted purposefully to be blown up. Although extremely volatile, it is transported in armored cases to prevent unintended explosions.

Variations- If you don't have the right terrain or miniatures, you can substitute the buildings for a wild forest planet, where the locals become hidden local fauna attacking from clumps of plants or trees.

The game can be scaled up to 4 or more players, just make sure the forces are balanced. You may want to increase the table size to 4'x 4' after 4 players.

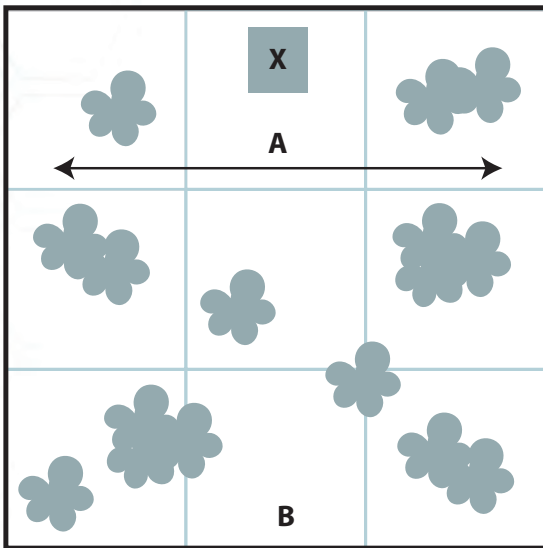

Taking Down the Force Field

2 - 4 Players

2' x 2' Playing Area

With the plans for the Doom Moon in hand, a weakness was quickly found in the Imperial design. The Moon has a force field protecting it. The generator station has been found, and group of plucky rebels just needs to blow it up using a Nova Bomb.

Set Up

The table should be covered in woods and fallen trees. As much cover as possible.

There should be a building or large antenna array at "X".

Imperial forces can set up anywhere behind the line at "A".

The rebels enter anywhere within 6" of "B".

Forces

Use standard Crew builds, but the Imperial forces all have the *Loyal* trait in addition to any other traits.

Special Rules

The Bomb- The rebels must assign 2 crew to carry the Nova Bomb. Use the Weapon Team rules. The bomb is on hover suspendors and moves at the rate of the Crew. If the Crew is reduced to one, It can still move, but at half rate.

The bomb must be placed in contact with the antenna. The rebels must spend an action to activate it. Once activated, it will detonate on the next King, Queen or Jack played.

The Natives- The rebels will have a tough time taking the Imperial position alone. Luckily, they have help from the local natives.

Shuffle a Joker into the deck. Whenever the Joker is played, the rebel player receives a group of Grunts armed with a mix of spears and bows. These natives are placed the following turn at ANY table edge.

The rebel player is dealt an additional card for each native group added.

If there are only two players, shuffle in both Jokers from the deck.

Time is of the essence- The rebel fleet above is fighting a losing battle. The force field around the Doom Moon must be knocked before the fleet has taken too much damage.

At the end of turn 6, roll a d10. If the die result 6 or below, the scenario is over and the fleet is defeated. If the roll is 7 or more, that becomes the last turn number for the game.

Victory

There is only one victory for the rebels. They must blow up the Imperial force field generator. This earns them **5 Renown**.

The Imperial forces must repel the rebel assault for their own **5 RP** victory.

Variations- The game can be scaled up to 4 or more players, just make sure the forces are balanced. You may want to increase the table size to 4'x 4' after 4 players.

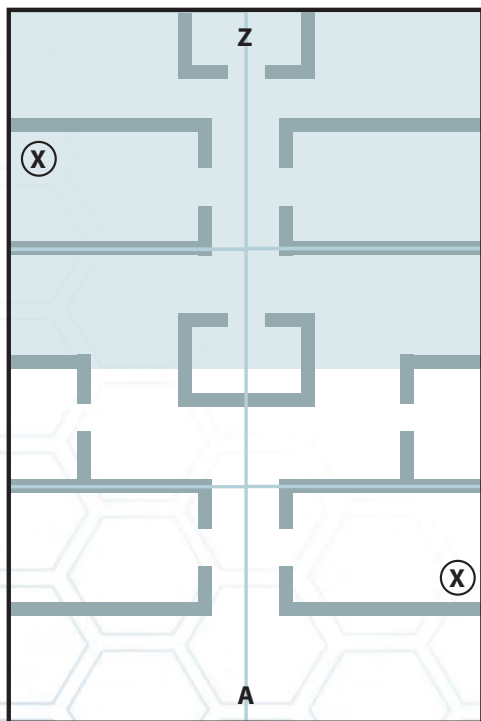

If you feel one side or the other is at a disadvantage, give the defenders more cover, or the attackers more troops.

Prepare to Repel Boarders!

2-4 Players

2' x 3' Playing Area

Alert! Alert! The shields are down! We have hull breaches on level 6 and 13! Security teams prepare to repel boarders.

Set Up

The table should be set up as a spaceship interior with walls and corridors to block line of sight. The above map is just a guide.

The attackers begin at the breach at "A". Defenders may start anywhere beyond the halfway mark (light blue area, above).

Forces

Both sides should have a standard Crew.

The attackers are wearing hardened Vacc-suits that count as Light Armor.

Special Rules

The boarders are trying to reach the Engine Room located at "Z". The ship has been crippled and the engines are currently off-line. The boarders are in a race against time to capture the engine room before the engines can be started and the ship jumps through Null-Space.

Teleporters- Luckily for the boarders, the ship has the latest in teleportation technology to aid moving crew and cargo around instantaneously. The two teleporter pads on the table are marked "X".

To use one, move a miniature onto the pad. The miniature is moved immediately to the other pad. Any remaining movement from the first action transfers through after the teleporter. *For example, if a miniature moves 3 inches to a teleporter pad, after the "jump", the miniature still has 2" left.*

Zero Gs- The gravity generator has been knocked out in the space battle. All troops are equipped with magnetic boots to hold them in place between moves.

When a miniature moves, it can only move in straight lines by pushing off and using momentum to drift to the next spot.

Time is Running Out- At the end of turn 6, roll a d10. If the die result 6 or below, the scenario is over and the engine is engaged, jumping to Null-Space. If the roll is 7 or more, that becomes the last turn number for the game.

Victory

The attackers need to capture the Engine Room before time runs out (*see above*). The defenders need to prevent this. The victor gets 5 points of Renown.

VEHICLES

What's Science Fiction without flying cars and big, stompy robots? These rules will help you integrate vehicles into your *Galactic Heroes* games.

Galactic Heroes is really about small scale skirmishes in the far flung future. With that in mind, these rules should fit in seamlessly with the rules you already know. The goal is to add flavor, and not make the cool toys the focus of the game.

I'm a big believer that big tanks rolling around the tabletop tend to unbalance the game and throw scale way out of whack. These rules will focus more on lighter vehicles zipping around the battlefield and less on heavy armored vehicles. They can still be in the game, but maybe just as the focus of a specific scenario.

Vehicle Stats

Vehicles are treated in much the same way as individual characters. They will have a Movement Rate, and a number of Damage Points.

The Shoot die will be based on the skill of the gun crew manning weapons, while the Close Combat die is based on how rugged the vehicle is.

In addition, vehicles will come in different sizes: Small, Medium, Large and Huge. There will also be a listing if there is additional room for passengers.

Operation

Driving will be done by a miniature assigned to be the driver. He or she is dealt a card just like any other member of your Crew. They get 2 Actions as normal.

Getting in or out of a vehicle takes an action. You could spend an action to move to reach a vehicle and spend an action to get in. This prevents a crew member from moving by foot and driving in the same turn.

Driver Actions

A driver gets 2 actions as usual when activating on their card. During their turn they may:

Move Straight- The vehicle moves in a straight line up to its full movement. Reverse is half.

Turn- The driver may turn the vehicle up to 90 degrees left or right. A vehicle can move half its movement rate after a turn.

Shoot- If the vehicle doesn't have a fully enclosed driver compartment or is opened topped, the driver may shoot with a side arm at a -1. If the vehicle has mounted weapon, operated by the driver, they can fire that instead.

Recovery- A driver can try to make a Recovery roll but may do no other actions.

Driver Out of Action

If the driver is put Out of Action, roll a d10. The direction the die "points" is the new facing of the vehicle, and the number rolled is the distance in inches.

Sample Vehicle	Size	Damage Pts.	Passengers	Move"	Special
Jet Bike	Small	2	1	12	<i>Agile, Hover, Fast</i>
Skimmer	Medium	3	2	8	<i>Hover</i>
Battle Walker	Large	4	0	6	<i>Walker</i>
Battle Wagon	Huge	6	6	5	-

4" more."

"Dash Dixon is piloting a hover car. He activates and uses his first action to drive 8" in a straight line. He uses his second action to make a 90 degree left turn and move

Control

Speeding around the battlefield is a dangerous enterprise. Drivers may be forced to check for Control for the following reasons:

Driver hit- If a driver is forced to roll on the Wound chart for any reason.

Driving through Difficult terrain- If a vehicle moves through any kind of Difficult terrain like rocky areas or dense jungle.

Hitting another vehicle or obstacle- If a vehicle collides with a another vehicle, or obstacle like a big rock or building. Collisions will likely damage the vehicle and crew.

Keeping control of your vehicle is a Task (see page 19).

Rolling for Control

To roll for Control, simply make a Task roll using a **d10** (d12 for Veterans, d8 for Green troops).

TASK	DIE ROLL
Easy	3+
Moving in Difficult terrain	
Regular	5+
Driver or Vehicle hit	
Hard	8+
Avoiding a collision	

Modifiers:

- 1 for each Wound or Shock marker
- 1 Vehicle Damaged (see below)
- +/- ? for Vehicle Traits

If a driver loses control, the vehicle spins in a random direction, unless it is stationary. If stationary, the vehicle backs up 2".

This loss of control is temporary. Next activation the driver may move and maneuver normally.

Collision

If a driver rolls a natural "1" when checking control, the Driver receives a Shock token. If a vehicle moves to touch another vehicle, a miniature or obstacle, a collision might occur.

Vehicle vs Vehicle- Both drivers must make an immediate Hard Task roll (8+). If a driver fails, The vehicle spins in a random direction and bounces 2" away from the other vehicle. The vehicle rolls on the Vehicle Damage chart (see *Damaging Vehicles*, below) with a modifier based on the size of the other vehicle:

Small +1
Medium +2
Large +3
Huge +4

Vehicle vs Crew- A miniature on foot must make a Hard Task roll (8+) to avoid being run over. If they avoid being hit, move them the appropriate distance to clear the vehicle. If they are hit, roll on Wound chart with the same modifiers above for the size of the vehicle. Vehicles are unaffected by these collisions.

Vehicle vs Obstacles- If a vehicle hits a obstacle or building, roll on the Vehicle Damage chart twice with the above modifiers above, based on its own size.

“Dash Dixon, Hero of the Spaceways, is hurtling down the crowded streets of Vesta Prime in Medium sized Skimmer. He’s chasing an Ornk piloting a small jet-bike. Dash rams him. Dash makes his roll for control (he’s a Hero and uses a d12). The Ornk fails. The unfortunate lunk has to spin out of control and rolls on the Vehicle damage chart with a +2 due to the size of Dash’s skimmer.”

Passengers

Any miniature on or in a vehicle who is not the driver, is a passenger. Each vehicle lists the number of miniatures a vehicle can carry besides the driver.

Passengers activate on their cards as normal. They can Shoot, make Recovery rolls, Reload, just like they would outside the vehicle.

Jumping on or off a moving vehicle requires a Hard Task roll (8+). If the miniature fails, immediately roll on the Wound Chart.

A moving vehicle is considered moving if it moved during the current turn or if it moved in the previous turn, but the driver has not activated yet.

Damaging a Vehicle

When a vehicle is hit from gunfire or collisions, roll on the following chart:

Roll	Result
0 or less	No effect
1-5	Check for Control
6-8	Damaged
9-10+	Out of Action

A +1 is added to the die roll for each Damage point already sustained by the affected vehicle.

You’ll notice the Damage chart is very similar to the Wound chart for Crew. This is on purpose to make it easier for players to remember.

Checking for control is explained on the previous page. The vehicle hasn’t been damaged, but the shock of being hit forces the driver to maintain control.

Vehicles have Damage Points instead of Wounds, but we should think of them just that way. Just like a member of you Crew, the more damage a vehicle takes, the less functional it is. It will have a -1 on it’s movement for every damage point it has.

Every subsequent Damage Point is a +1 modifier to the Damage chart making already damaged vehicles easier to put Out of Action.

Out of Action for a vehicle is the same as for Crew. It may or may not being a burning hunk of wreckage, it may just have shot out tires or blown engine. Whatever the cause, it is out for the rest of the game. You can leave the vehicle on the table as an obstacle or cover.

Drivers or passengers aboard a vehicle put Out of Action must pass a Hard Task or have to roll on the Wound chart.

“The Ornk hit by Dash lost control of his jet-bike. He rolls to find the direction of his spin, then rolls on the Damage chart adding +2 for the size of Dash’s skimmer.

He rolls a 7, but adding +2 takes him from damaged, to Out of Action. The unlucky greenskin must make a Hard Task roll of 8+ but fails, and now has to roll on the Wound chart. He gets a Shock, but walks away otherwise unscathed.

Vehicle Combat

Shooting from a vehicle- If a driver or passenger is shooting, just use the normal Shooting rules from *Galactic Heroes*, but remember there is a -1 for shooting from a moving vehicle.

Shooting at a vehicle- When shooting at a vehicle, you must declare if you targeting the vehicle or driver or passengers.

If the vehicle has an enclosed crew compartment like an armored vehicle, you can't target the passengers or driver. If the driver or passengers are exposed, the target will be determined randomly unless under a burst template. There is a -1 for shooting at Crew in a moving vehicle. In addition, they are considered in cover and get an additional -1 or -2 if the vehicle has armor..

Shooting at a vehicle itself is easier. Most vehicles are big enough there is no -1 penalty for shooting at them. Small vehicles, such as motorcycles and jet-bikes are small and quick enough, they still get the modifier.

Close Combat and Vehicles

If a crew member is able to board a vehicle (see above), follow the regular rules for Close Combat. We assume crew compartments are large enough to maneuver, but small enough fights are one on one.

If the driver is put Out of Action, the attacker may take control of the vehicle. Any defeated Out of Action enemies can be tossed overboard in a cinematic fashion.

If a miniature tries to directly attack a vehicle in Close Combat, the driver of the vehicle gets to use vehicle size as a bonus to the Close Combat roll:

Small +1
Medium +2
Large +3
Huge +4

Vehicle cannot be knocked back or kept in Close Combat.

Vehicle Weapons

Before deciding what weapons your vehicle is carrying, you'll have to figure out what fire arc each weapon will have.

Draw a line across the appropriate side the weapon is mounted (front, side or rear). Everything in front of this line is within the weapon's arc or fire. Turret mounted weapons can fire in all directions.

The number of weapons a vehicle can carry is based on the vehicles size. The size gives you a number of slots that are open for weapons. The number of slots just happens to coincide with the number of hits a vehicle can take.

Small: 2
Medium: 3
Large: 4
Huge: 6

Heavy weapons like Machine Guns, Heavy Lasers and Blasters, that would normally require a Team, can be mounted on most vehicles. They take up **2 slots**.

Larger weapons, that would be found on military style vehicles, require crews to serve them. These crews will take up passenger spots.

Gun crews function just like *Weapon Teams* (see page 45).

We break these “Big Guns” into three broad categories: **Light, Medium and Heavy**.

What you decide to call them is up to you: Twin-Turbo Laser, Blast Cannon, Melter. They function the same for purposes of the game.

Gun	Slots	Crew	Special Rules
Light	2	1	AP1
Medium	3	2	AP2, Blast 3
Heavy	4	3	AP2, Blast 5, +1 DMG

AP1: *Armor Piercing rounds that can ignore one level of Armor*

AP2: *Armor Piercing rounds that can ignore two levels of Armor*

Blast 3/5: *Use the 3” or 5” Blast template.*

+1 DMG: *Add +1 to the Wound or Vehicle Damage roll*

Vehicle Armor

Vehicles will have No Armor, Light Armor or Heavy Armor. No armor means just that, no armor. This covers most civilian or scout vehicles.

Armor carried by vehicles is heavier than armor worn by troops. Armored vehicles can only be damaged by weapons that are listed as being **Blast, Team, Deadly** or have an **Armor Piercing or AP** value. This means most small arms carried by your troops cannot harm them.

Vehicles automatically pass the Armor Roll versus small arms. This means the worst that happen is a Damage result.

Example: A Light gun with AP1 fires at a Walker with Heavy armor. The gun’s AP1 ignores one level of armor. That means the walker’s Armor Roll is 8+ instead of its usual 6+.

Vehicle Traits

Just like your troops, you can add flavor to your vehicles by adding Vehicle Traits. Each vehicle has **3 points** to spend on Vehicle traits. The traits below list the cost after name. Some traits have a restriction due to size.

Advanced Sights (1)- +1 to Shoot roll.

Agile (1)- this vehicle can turn up to 180° each action.

Amphibious (1)- the vehicle can move through water at full movement rate.

Durable (1)- the vehicle has one extra damage point for its size.

Fast (1)- add 2” per move action.

Flamer (1)- vehicle is equipped with a flamer.

Heavy Armor (2)- the vehicle has two levels of armor. The armor roll is 6 or more. Vehicle must be Large or Huge.

Hi-Tech (1)- guns require one less crew to man.

Hover (2)- this vehicle can cross rough terrain (including water) with no control test.

Hull Mount (0)- guns require one less crew to man, but the gun is fixed forward.

Indirect Fire (1)- vehicle’s gun does not need a direct line of sight as long as it has a spotter in the form of a Drone or Crew with line of sight. The target must be more than 12” away.

Light Armor (1)- the vehicle has one level of armor. The armor roll is 8 or more.

Stabilizers (1)- drivers get a +1 to Control tests.

Transport (1)- the vehicle adds two more passenger spots.

Treads (0)- this vehicle can cross Rough terrain with no control test, but can only make 45° turns.

Turret (1)- vehicle's gun may fire in any direction.

Walker (1)- Control tests are a +1 for moving through Rough terrain.

"Rebels have somehow got their hands on an armored transport (Large Vehicle). They equip it with Twin-Turbo lasers (Medium Gun, 3 Slots).

The 3 points available for Traits are used are Transport, Light Armor and to put the gun on a Turret mount.

At the beginning of the turn, the Rebels are dealt 4 cards. One for the driver, one for the gun crew (remember, they act as Teams), and two for the two passengers on board.

During the turn, the driver activates and uses his first action to move 8" straight ahead, and his second action to turn around a corner and move a further 4".

The gun crew activates on another card and uses the Laser's burst ability on a group on Unionist Shocktroopers. One of the Shoot rolls is a natural 1, meaning the gun is "Out of Ammo".

The Shocktroopers have a Heavy Blaster and fire back. The -1 for shooting at moving target is nullified by the size of the Rebel transport. However, the Heavy Blaster has no AP factor. The Shocktroopers manage a hit and roll 6 on the Damage roll. This would normally be a "Vehicle Damaged" result, but because vehicle armor automatically makes its Armor Roll against weapons of this size, the attack results in a Driver Control test instead.

The driver needs a 5 or more, but rolls a 4! The vehicle moved this turn so the driver drops a d10 next to the transport. The impact of the Heavy Blaster caused the driver to flinch and swerve in the direction the die is pointing.

Still later in the turn, the passenger's cards come up. They decide to pass because the vehicle moved this turn, meaning they would be jumping out of a moving vehicle (8+ Task roll).

The next turn, the driver doesn't move the transport. The passengers jump out the back on their turns and the crew use a 6 card to automatically reload their Twin-Turbo Laser, and blast the Unionist oppressors!"

Anti-Vehicle Weapons

If you want to add some weapons especially made to help the foot-sloggers take out vehicles, here's a couple.

Anti-Tank Missiles- These follow the same rules for Missile Launchers found earlier in the rulebook, except now they gain the *Deadly* trait when used against Armored targets.

That means any Shoot roll that scores a 10 or more, automatically puts the vehicle Out of Action. They should be carried by *Specialists*.

Minefields- You can add minefields to a scenario to provide some extra tension.

Define an area no bigger than 1 foot by 1 foot for your minefield. This can be known to players or drawn on a hidden map and handled by a referee or third party.

Any miniature or vehicle which crosses the minefield must pass a Hard Task roll for each 3 inches they travel. If failed, roll immediately on the Wound or Vehicle Damage chart with a +3 modifier. Hover vehicles roll as a Regular Task

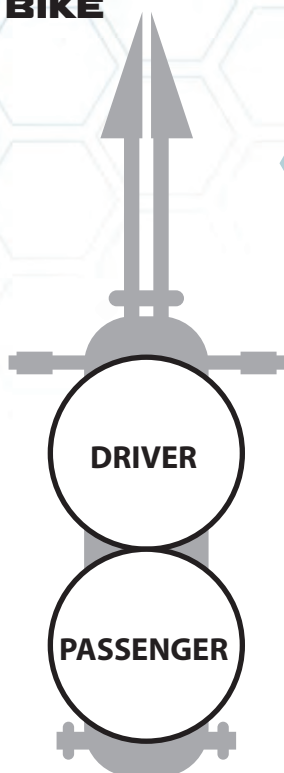

Vehicle Templates

Rather than clutter up the battlefield with miniatures piled on top or next to vehicles, we provide you with templates. Place these off to the side and use them to show who is in a vehicle, and where they are.

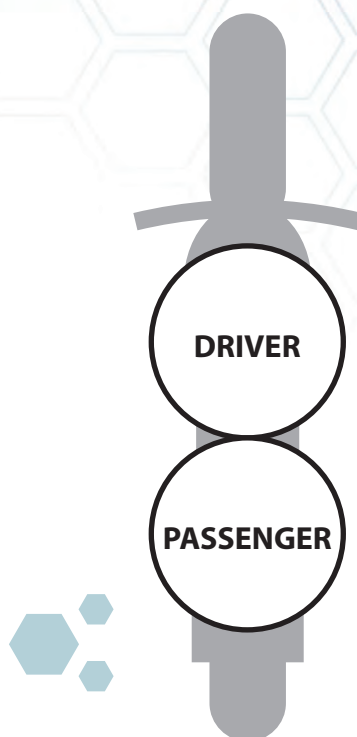

On the next few pages are templates. We can't cover all possibilities, but hopefully there are enough to get you started.

Permission is given to photocopy.

CODEX GALACTICA

Contained within this Top Secret index are some suggested traits and rules for adapting your favorite Sci-Fi troops to the **Galactic Heroes**. The list is by no means exhaustive, and we don't claim to be experts on any of the subjects, just admirers.

We are also by no means affiliated with any of the below subjects and do not mean to encroach on any intellectual properties. We only offer an alternative to use your toys with our game.

Feel free to adapt or outright change any of the statistics to your liking. Only make sure everyone involved is happy and accepting of the final result.

Each listing will give an overall view followed by important characters and troop types.

Name and type: Hero, Leader, Specialist, Regular or Grunt

Traits: what and how many traits

Weapons: what weapons and any special rules associated with them if they vary from the standard rules

Faction: whose side they fight for.

Crew Traits: does this group share a Trait

Dash Dixon and the Rocket Rangers

Though born of Earth, Dash has taken on the mission of freeing the Galaxy of the oppressive rule of Xorg-khan. He has managed to unite the disparate peoples of Xorg-khan's empire into a formidable fighting force against Warlord's tyranny.

Dash Dixon (Galactic Hero) d12

Traits: Leader, Deadeye, Encouraging, 9 Lives

Weapons: Blast Pistol, Power Sword (Deadly)

Faction: Rocket Rangers and Hero of the Spaceways

Lance Laser (Leader) d12

Traits: Leader, Veteran, 2 Guns, Lightning fast

Weapons: Twin Laser Pistols

Faction: Star Rangers and Dash's right hand man

Stella Starfire (Specialist) d10

Traits: Dodge, Fearless

Weapons: Blast Pistol, Sonic Boomerang (act as grenades)

Faction: Star Rangers and Dash's paramour

Grunk (Regular) d10

Traits: Large

Weapons: Blast Pistol

Faction: Star Rangers and Lance's faithful companion

*The Star Rangers are all **Loyal**.*

The Birdmen of Vultanus

The moon of Vultanus circles the Xorg-Khan's fortress world of Xorg Prime. Vultanus is full of high mountain peaks and populated by the Birdmen, who have mastered the power of anti-gravity to build their flying cities. Though human in appearance, the Birdmen have lighter bones and lay eggs. They are a fiercely proud race and have long hated Xorg-khan's rule. It didn't take much for Dash Dixon to win them to his cause.

Vultos, King of the Birdmen (Leader) d12

Traits: Leader, Veteran, Brawler, Bloodthirsty

Weapons: Power Mace (delivers extra shock marker on impact)

Faction: Free People's of Xorg Prime and allied to the Star Rangers

Falco (Specialist) d10

Traits: Strong, Deft

Weapons: Heavy Blaster

Birdman Trooper (Regular) d10

Traits: Dodge

Weapons: Blast Rifle

Hawklet (Younger Grunts) d8

Traits: Dodge

Weapons: Blast pistol, sword

All Birdmen have the **Flier** trait.

The Rangers of the Forest Moon

The moon of Sylvanus is covered in lush forests which Xorg-Khan has exploited for generations. The inhabitants of Sylvanus have fought a guerilla war against Xorg-khan to no avail. It was only when their Leader, Baron Dal-tan joined forces with Dash Dixon, did the war for freedom truly begin!

Baron Dal-tan, Lord High Ranger (Leader) d12

Traits: Leader, Veteran, Master, Flurry of Blows

Weapons: Laser Pistol, Sword

Faction: Free People's of Xorg Prime and allied to the Star Rangers.

Quarrel (Specialist) d10

Traits: Sniper, Deadeye

Weapons: Sniper Rifle

Ranger Trooper (Regular) d10

Traits: Infiltrator

Weapons: Laser Crossbow

*The Forest Rangers are all **Rangers**.*

Catwomen of Felinus

The jungle moon of Felinus is inhabited by fierce cat-like women. Their quick reflexes and claws make them brutal in combat. They are cunning, and know when to fight from a stealthy position. Their Queen, Tigra, has longed of throwing off Xorg-khan's shackles.

Tigra, Queen of the Catwomen (Leader) d12

Traits: Leader, 9 Lives, Flurry of Blows, Bloodthirsty

Weapons: Laser Pistol, Sword

Faction: Free People's of Xorg Prime and allied to the Star Rangers

The Robot Legion

Panthra (Specialist) d10
Traits: Determined, Dodge
Weapons: Flamer

Catwomen (Regular) d10
Traits: Stealthy
Weapons: Laser Rifle

All Catwomen have the **Ferocious** trait.

The Imperial Forces of Xorg-Khan

Xorg-Khan is a ruthless warlord who has held his Galactic Empire together through brutality and sheer force of will. He has crushed threats internal and external for centuries. Now, this Dash Dixon has risen to threaten his rule. It's only a matter of time before he too, will fall.

Emperor Xorg-khan (Galactic Villain) d12
Traits: Leader, Fearsome Presence, Cold Blooded, Bodyguard
Weapons: Blast Pistol, Power Sword (Deadly)
Faction: The Benevolent Empire of Xorg-khan

Princess Aurora (Specialist) d10
Traits: Slippery, Steady
Weapons: Laser Pistol

Imperial Trooper (Regular) d10
Traits: Deadeye
Weapons: Blaster Rifle

Imperial Trooper Gun Team (Team) d10
Traits: Steady
Weapons: Heavy Blaster

Azullian Shocktroopers (Regular) d10
Traits: Ferocious
Weapons: Mazers, Light Armor

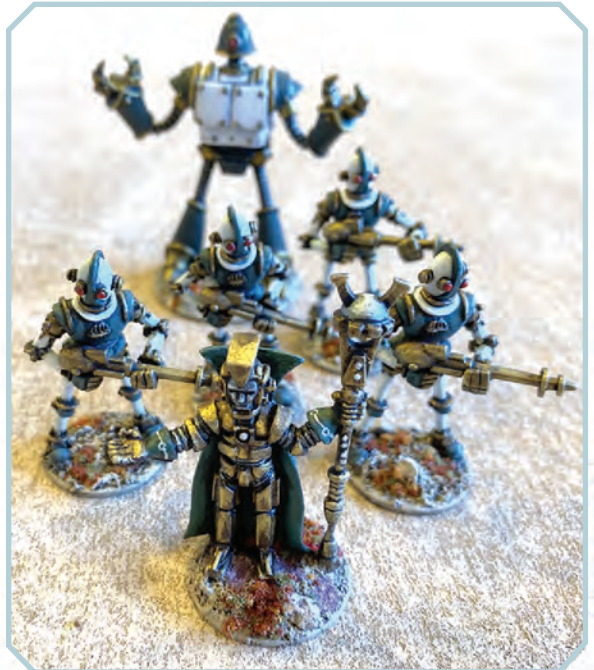

*Imperial Troops are all **Killers**.*

The Robot Legion were built by the Artificial Intelligence known only as the Convergence. Years of war had taught Xorg-khan that he had no way to defeat the Robot Legion. Instead, he uses them as mercenaries and cannon fodder. The Convergence keeps its secrets to itself.

Robot Legionnaire Primary (Specialist) d10
Traits: Soulless, Strategist
Weapons: Laser Rifles
Faction: The Benevolent Empire of Xorg-khan

Robot Legionnaire (Regular) d10
Traits: Soulless
Weapons: Laser Rifles

*Robot Legionnaires are **Special Ops**.*

A Faraway Galaxy

The Galactic Republic has fallen. A new, dark Empire has risen to replace it, led by the Emperor and his ruthless right hand, Varzz Darko. But fear not, for a rebellion led by the ancient Templars of Eternal Light has begun. A young disciple will lead them.

Varzz Darko (Galactic Villain) d12

Traits: Leader, Psionics, Brawler, Determined

Weapons: Laser Sword (Deadly)

Faction: Galactic Empire

Red Guard (Specialist) d10

Traits: Ferocious, Determined

Weapons: Laser lance (Combination Laser Rifle and Sword)

*The Red Guard are **Heroes All** making them all Specialists*

Imperial Shocktrooper Commander (Leader)

Traits: Leader, Encouraging, Steady, Deadeye

Weapons: Blaster Pistol

Imperial Shocktrooper Gunner (Specialist) d10

Traits: Strong, Eagle Eyed

Weapons: Heavy Blaster

Imperial Shocktrooper (Regular) d10

Traits: Steady

Weapons: Blaster Rifle

Imperial Scout Shocktrooper (Regular) d10

Traits: Ranger

Weapons: Blaster Rifle

*All Shocktroopers have **Advanced Comms**.*

Imperial Navy Landing Party (Regular) d10

Traits: Killer

Weapons: Blaster Rifle

Players can decide if Imperial troops have armor.

Rebel Scum

Opposing the Empire is a ragtag group of rebels led by Logan Stormstrider. What they lack in men and equipment, they more than make up for in courage and tenacious spirit.

Logan Stormstrider (Galactic Hero) d12

Traits: Leader, Brawler, Psionics, 9 Lives

Weapons: Blast Pistol, Power Sword (Deadly)

Faction: The Rebellion

The Princess (Leader) d10

Traits: Encouraging, Smart

Weapons: Laser Pistol

Hank Zero (Leader) d12

Traits: Leader, Veteran, Deadeye, Killer

Weapons: Blaster Pistol

Kewgaga (Specialist) d10

Traits: Strong, Killer

Weapons: Heavy Blaster

Rebel Trooper (Regular) d10

Traits: Cool Headed or Steady

Weapons: Blaster Rifle

Rebel Gun Crew (Team) d10

Traits: Deadeye

Weapons: Heavy Blaster

Rebel Commando (Regular) d10

Traits: Ranger

Weapons: Blaster Rifle

Rebel Navy Landing Party (Regular) d10

Traits: Steady

Weapons: Blaster Rifle

*All Rebels are **Loyal**.*

Bounty Hunters and Others Villains

Grubba the Gut (Galactic Villain) d12
 Traits: Leader, Fearsome Presence, Concealed
 Weapon, Posion
 Weapons: Blast Pistol

Faction: They work for the highest bidder

Bubsa Fezz (Leader) d12
 Traits: Leader, Veteran, Flier, Indomitable
 Weapons: Blaster Pistol, Flamer

IT-66 (Specialist) d12
 Traits: Ranged Fighter, Souless
 Weapons: Blaster Rifle

Hunters (Regular) d10
 Traits: Deadeye
 Weapons: Blaster Pistol

Local Muscle (Grunts) d8
 Traits: Street Fighter
 Weapons: Blaster Pistol or Close Combat weapon
 of your choice

*All Bounty Hunters are **Killers**.*

Federated Space

Humans have mastered the technology of faster-than-light travel, and have boldly gone where no one has gone before. Though they have come in peace, merely to explore, they have found the universe isn't always so nice.

The Captain (Leader) d12
 Traits: Leader, Veteran, 9 Lives Encouraging,
 Weapons: Phazor

Science Officer (Above Average Regular) d10
 Traits: Smart, Defensive Fighter
 Weapons: Phazor

Medical Officer (Above Average Regular) d10
 Traits: Medic, Steady
 Weapons: Phazor

Crewman (Above Average Regular) d10
 Traits: Deadeye, Steady
 Weapons: Phazor

Guys in Red Shirts (Grunts) d8
 Traits: Nerves of Steel
 Weapons: Phazor

*Federation Crew have **Above Average**.*

The Phazor- The Phazor is a special energy weapon with 2 settings. Before firing, the player must decide which to use. The "Stun" setting may only cause Shaken results on the Wound roll, but causes 2 shock markers to be applied. If the "Kill" setting is used, the weapon gets the Deadly trait. A 10 or more on the Shoot roll causes an "Out of Action" result. No need to roll to wound. If the Kill setting results in a Out of Action result, the Crew receives -1 Renown for the scenario.

Teleporters- The Federation has found a way to transport living matter by atomizing it and reforming it in another location. In game terms, this means the Federation player can decide to remove their crew member when they activate. They may not return to the game once this is used. Before the miniature teleports, roll a d10. On a roll of 1 or 2, the teleporters are having trouble locking on. They cannot be used this turn.

Enemies of the Federation

The Krang are violent race of warriors. They seek only glory and conquest

Krang Warleader (Leader) d10

Traits: Leader, Impervious, Ferocious, Brawler

Weapons: Laser Pistol, Krang Battle Blade

Krang Sergeant (Specialist) d10

Traits: Strong, Deadeye, Brawler

Weapons: Heavy laser

Krang Warrior (Regular) d10

Traits: Brawler

Weapons: Heavy laser

*All Krang are **Bloodthirsty**.*

Botz Collective

The Botz are a cybernetic hive mind, bent on domination and assimilation of all sentient life forms.

Botz (Regular) d10

Traits: Soulless

Weapons: Laser Pistol

The Botz are treated as **Special Ops**: they have no Leader, but instead gain 3 Regular spots.

Special Rules

Capture- Any crew member taken Out of Action must be left on the table. If a Botz touches the downed miniature, they teleport off the table with the victim to be added to the Collective. The Botz receive 1 Renown for each captured enemy.

Interdimensional Time Travelling Scientist

Out in the depths of time and space live an undying race. They are masters of time and space manipulation. One has chosen to travel the cosmos in search of knowledge, and also some companionship. Allied against him are a host of deadly aliens bent on conquest and destruction.

The Good Doctor (Galactic Hero) d12

Traits: Leader, Smart, Regeneration, 9 Lives (some say more)

Weapons: The Wonderful Widget- Works as a Laser Pistol, but also gives +2 to any technology based Task Roll.

Companion (Specialist) d10

Traits: Dodge, Fearless

Weapons: Choose a ranged pistol type.

To fill out the Good Doctor's forces, used the standard Galactic Heroes rules for Regulars. The type will depend on the time or planet in question. *For example:*

Earth Defense Force (Regular) d10

Traits: Nerves of Steel

Weapons: Auto Rifle.

*Earth Defense troops have **Advanced Comms**.*

Special Rules-

Undying- The Good Doctor cannot die. He is reborn if his mortal body is destroyed. He will not miss any games in a campaign due to being taken Out of Action.

Interdimensional Enemies

The Darloks are an inherently evil race of cybernetic beings. They rely on a suit of mobile armor to protect their frail bodies from harm.

Darlok Leader (Leader) d10

Traits: Leader, Killer, Cunning, Ranged Fighter

Weapons: Mazer

Darlok Heavy (Specialist) d10

Traits: Killer, Ranged Fighter

Weapons: Heavy Laser

Darlok Drone (Regular) d10

Traits: Ranged Fighter

Weapons: Mazer

All Darloks have **Light Armor** and you may add **Fliers** if you so chose.

Special Rules-

When a Darlok is taken Out of Action, it will explode. Use the 5" Blast template centered on the Darlok.

The Roboton are similar to the Botz Collective, in that seek to convert the universe to their own "pure" form. They have but one weakness: Gold!

Roboton troops are considered Above Average. They have no Specialist but all Regular troops get an extra Trait.

Roboton Leader (Leader) d10

Traits: Leader, Regenerate, Armored Hide, Smart

Weapons: Laser Pistol

Roboton (Regular) d10

Traits: Regenerate, Armored Hide

Weapons: Laser Rifle

*All Robotons are **Soulless**.*

Special Rules

Capture- Any crew member taken Out of Action must be left on the table. If a Roboton touches the downed miniature, they may then carry them off the table. The Robotons receive 1 Renown for each captured enemy.

Upgrade- If a Roboton is wounded, roll a d10. On a 8+, the Robotons have adapted to that form of attack, for instance, Lasers. After that, they cannot be harmed by that kind of weapon.

This rule does not apply to the Good Doctor's Wonder Widget.

Special Weakness- If an enemy is armed with a weapon of gold, be it gold bullets or a gold sword, it counts as Deadly against Robotons.

The Automatons are plastic mannequins animated by an alien consciousness. They have been used in numerous attempted invasions as cannon fodder.

Automatons use the **Horde** Trait. There is a Leader and the rest of the spots are taken by Grunts.

Automaton Leader (Leader) d10

Traits: Leader, Strategist, Infiltrator, Killer

Weapons: Hand Blaster (treat as Blaster Pistol)

Automaton (Grunts) d8

Traits: Killer

Weapons: Hand Blaster (treat as Blaster Pistol)

All Automatons are **Soulless**.

Crying Statues are living statues capable of killing living creatures with their touch alone. They take the form of weeping angels.

Crying Statues are treated as **Heroes (Villains?) All**. No Leader, but they receive 4 Specialists.

Crying Statue (Specialist) d10

Traits: Brute, Brawler

Weapons: None, but count as Deadly in Close Combat.

*Crying Statues are **Soulless** and **Infiltrators**.*

Special Rules-

Special Moves- Crying Statues cannot move if an enemy has line of sight to them. Otherwise, they must pass.

Solarians are a grim race of clones bred only for war. They are good fighters, but not particularly bright.

Solarian Leader (Leader) d10

Traits: Leader, Brawler, Armored Hide, Unstoppable

Weapons: Laser Pistol

Solarian Specialist (Specialist) d10

Traits: Strong, Armored Hide

Weapons: Heavy Syringe Gun (Heavy Laser)

Solarian Soldier (Regular) d10

Traits: Armored Hide

Weapons: Syringe Gun (Laser Rifle)

Solarians start with a **Distress Beacon**.

Special Rules-

Weak Spot- Part of the cloning process has left

Solarians with a weak spot in the back of their necks. Any Ranged attack from behind gives the attacker a +1 to Hit and +1 to Wound.

A Grim, Dark Future

Far, far into the future, there is only war. The Undying Emperor leads an eternal crusade against the evil denizens of the Outer Dark. Countless hordes wage an unending attack against humanity. Only the forces of Humanity, driven by the grim will of Emperor stand against them.

Imperial Marines are genetically enhanced super soldiers bred for war against Earth's enemies. They have no fear and are full of the spirit of the Emperor.

Marine Captain (Leader) d12

Traits: Leader, Veteran, Killer, Brawler

Weapons: Auto Rifle, Chainsword (Deadly)

Marine Sergeant (Specialist) d10

Traits: Strong, Deadeye

Weapons: Machine Gun or Rocket Launcher

Marine (Regular) d10

Traits: Killer

Weapons: Auto Rifle

*All Marines have **Heavy Armor** and are **Steady** and **Loyal**.*

Guardsmen make up the bulk of the Empire's troops. They are drafted from thousands of inhabited worlds. Though simple humans, war has honed them into excellent fighters.

Squad Leader (Leader) d10

Traits: Leader, Indomitable, Killer, Deadeye

Weapons: Auto Pistol, Sword

Squad Support (Specialist) d10

Traits: Strong, Deadeye

Weapons: Heavy Laser or Rocket Launcher

Guardsmen (Regular) d10

Traits: Killer

Weapons: Auto Rifle or Laser Rifle

A squad may replace their Specialist with Political Officer instead, to inspire the men.

Political Officer (Specialist) d10

Traits: Encouraging, Brawler

Weapons: Laser Pistol, Chainsword (Deadly)

*All Guardsmen are **Fearless**.*

Special Rules

Territorial Troops- The myriad planets that make up the Empire provide many specialist troops, adapted from their planet of origin. These troops function essentially like regular Guardsmen, but get a bonus Crew Trait.

Jungle Troopers get the **Ranger** Trait. The jungles of their home world have made them adept at moving through rough terrain.

Death Troopers get the **Soulless** Trait. Though not robots, they have seen too much war...

Desert Troopers get the **Stealthy** Trait. The shifting sands breed warriors that know how to use terrain to their advantage.

Winter Troopers get the **Cool Headed** Trait. The harsh winters of their homeworld make sturdy, deliberate warriors.

Shock Troopers get the **Bloodthirsty** Trait.

The Inquisition is the right hand of the Emperor used to root out heresy and opposition to his rule. Inquisitors are feared throughout the galaxy by good and evil alike.

Inquisitor (Galactic Villain) d12

Traits: Leader, Psionics, Brawler, Determined

Weapons: Blaster Pistol, Chainsword (Deadly)

The **Aeldaren** are an ancient race, much older than man. Their alien schemes are eons in the making. Sometimes they find themselves allied with mankind, but more so against them. Much like their warriors, their weapons are as deadly as they are beautiful to behold.

War Leader (Leader) d10

Traits: Leader, Brawler, Lightning Fast, Nerves of Steel

Weapons: Shuriken Pistol (treat as Laser pistol), Chainsword (Deadly)

Weapon Mage (Specialist) d10

Traits: Strong, Deadeye

Weapons: Shuriken Cannon (treat as Heavy Laser)

Aeldaren Warrior (Regular) d10

Traits: Eagle Eyed

Weapons: Shuriken Thrower (treat as Laser Rifle)

All Aeldaren have **Light Armor** and **Killers**.

Your Warhost may also include a Warlock. These psychics help guide the Warleaders and can deliver mental attacks. Replace a War Leader with a Warlock.

Warlock (Leader) d10

Traits: Leader, Psionics, Lucky, Master

Weapons: Shuriken Pistol (treat as Laser pistol), Banesword (Deadly)

Special Rules

The long lived Aeldaren find themselves sometimes specializing in a deadly art they call Guilds. Here are but a few.

Fire Serpents trade their Shuriken Throwers for Flamers.

Howling Ghosts are close combat specialists. They trade their ranged weapons for swords and Eagle Eyed for the Brute Trait.

Stinging Scorpions have upgraded to Heavy Armor, Shuriken Pistols and Chainswords (Deadly).

Shade Spiders are Heroes All. They are equipped with Teleporter Belts. They trade the Eagle Eye for Strong to carry their Vortex Guns (treat as Heavy Blasters).

Rangers get the Ranger Trait.

Screaming Eagles get the Flier Trait from their winged Jetpacks.

Grim Reapers are the most feared. They are Heroes All. They are Strong and carry the Deadly Reaper Cannon. Treat as a Heavy Laser that is also Deadly.

Amongst the Aeldaren host can be found the Exalted. These are dead warriors who have had their spirit transferred into a robot body.

Exalted (Regular) d10

Traits: Soulless

Weapons: Shuriken Thrower (treat as Laser Rifle) and Heavy Armor.

There are creatures, they say, just on the other side of our reality, waiting to get in. The Imperial Scientists and Clergy refer to them as **Daemons**. These creatures are monstrous to behold. Many can easily drive any sane creature to madness.

Daemon (Alien Monster) d12

Traits: Psionics, Creature of the Outer Dark, Poison, Cause Fear, God-like

Weapons: Monstrous Weapon. Treat as Deadly.

The Daemon possessed can use the regular statistics for any human troops type, just give them Soulless to show their lack of fear, and dedication to their alien god.

The Mektons are a race that may be the oldest in the known universe. Long ago they shed their feeble mortal flesh and bone for steel and adamantine. They know only conquest.

Mekton Lord (Leader) d12

Traits: Veteran, Brawler, Energy Blast, Summoner

Weapons: Power Spear (Deadly)

Option: add Flier Trait if mounted on skimmer.

Mekton Warrior (Specialist) d10

Traits: Large, Sniper

Weapons: Mekton Heavy Ravager (treat as Heavy Blaster)

Mekton Warrior (Regular) d10

Traits: Deadeye

Weapons: Mekton Ravager (treat as Blaster Rifle)

Mekton Flayers (Grunts) d8

Traits: Ferocious

Weapons: Claws (+1 to hit in Close Combat)

*All Mektons are **Soulless** and have **Light Armor**.*

The **Ornks** are a brutish race of savages. They live only for war and conquest. Each generation, they swell in numbers and burst into a horde out for blood and battle.

Ornk Warboss (Leader) d10

Traits: Leader, Brawler, Armor, Tough as Nails

Weapons: Auto Pistol, Chainsword (Deadly) and Heavy Armor

Ornk 'Eavy (Specialist) d10

Traits: Strong, Deadeye

Weapons: Machine Gun, Flamer or Missile Launcher

Ornk Brutes (Regular) d10

Traits: Killer

Weapons: Auto Rifle

*All Ornk are **Bloodthirsty** and **Tough as Nails**.*

Ornks are a latently psychic race. Those among the horde that show real talent are called **Weirdos** by the rest of the Ornks. Replace a War Boss with a Weirido.

Weirido (Leader) d10

Traits: Leader, Psionics, Tough as Nails, Sixth Sense

Weapons: Auto Pistol, Chainsword (Deadly)

Among the Ornk are a more feral breed. They are the **Savage Ornk**. They often ride into battle on huge boar-like creatures.

Savage Ornk (Regular) d10

Traits: Brute

Weapons: Axe, Club or Spear

Savage Ornks mounts are *Ferocious*.

There are smaller creatures related to the Ornk that they treat as a client race. These are the **Gubbinz**. They are a cowardly lot, but can be deadly in the right circumstances.

Gubbin Warrior (Grunts) d8

Traits: Killer, Small, Slippery

Weapons: Auto Rifle or Shotgun

The **Tor** have emerged as a threat to humanity only recently. They are highly advanced and have rigid caste system that makes them well disciplined. Full of hope and optimism, they stand in stark contrast to humanities dark, desperate outlook.

Tor Leader (Leader) d12

Traits: Leader, Veteran, Psionics, Encouraging

Weapons: Power staff (treat as both Spear and Laser Rifle)

Tor Battle Suit (Specialist) d10

Traits: Large, Deadeye

Weapons: Heavy Laser, Flamer, Heavy Armor

Tor Warrior (Regular) d10

Traits: Steady

Weapons: Laser Rifle

Tor Scout (Specialist) d10

Traits: Infiltrator, Sniper

Weapons: Sniper Rifle

Tor Wayfinder (Specialist) d10

Traits: Ranger, Deadeye

Weapons: Blaster Rifle

All Tor **Light Armor** and **Advanced Comms**.

Tor Client Races

The Tor employ several sentient races as mercenaries, each with unique skills to bring to the fight

The **Broot** are a primitive race. Their jungle planet is a harsh place, where just about everything is trying to eat you. This constant threat breeds fierce warriors.

Broot Warchief (Leader) d10

Traits: Leader, Fearless, Master, Lightning Fast

Weapons: Auto Rifle

Broot Warrior (Regular) d10

Traits: Fearless

Weapons: Auto Rifle

Broot Hounds (Grunts) d10

Traits: Animal, Ferocious

Weapons: Claws/Fangs

Mounted Broot Warrior (Regular) d10

Traits: Horseman (Mount is Sprinter & Ferocious)

Weapons: Auto Rifle

All Broot have the **Camouflage** trait.

Vizpoids are insect fliers used by the Tor as fast attack troops.

Vizpoid Warrior (Regular) d10

Traits: Flier

Weapons: Blaster Rifles

Vizpoids have the **Killer** trait.

Ancient Mars

Long ago, Mars thrived green and lush. Ships plied its deep canals. Airships graced its skies. Civilization flourished. Then, a great cataclysm wrecked Mars' environment. Some say the very planet shifted out of orbit. Others blame a more nefarious plot from within.

Now the world has been thrown into a great dark period. Few cities remain. Barbarians knock at their gates. Can a man from Earth save them?

Jack Carson (Galactic Hero) d12

Traits: Leader, Master of Melee, Brawler, 9 Lives

Weapons: Radium Pistol, Sword

Faction: Helios, Capital of Mars

Torgar Tor (Leader) d12

Traits: Leader, Veteran, 2 Fisted, Thundering Charge

Weapons: Radium Rifle, Sword

Faction: Green Martian but allied to Carson

Delah Durna (Specialist) d10

Traits: Dodge, Fearless

Weapons: Radium Pistol, Dagger

Faction: Helios and Carson's paramour

Red Martians are the dominant humanoid species on Mars. They look very similar to Earth men in appearance, with a ruddy complexion. They have a deep sense of honor.

Red Martian Leader (Leader) d12

Traits: Leader, Veteran, Swordsman, Loyal

Weapons: Radium Rifle, Sword

Faction: Helios, Capital of Mars or another city.

Red Martian Soldier (Regular) d10

Traits: Brawler, Loyal

Weapons: Radium Rifle, Sword

Green Martians are 7-8 foot-tall humanoids with 4 arms and a vaguely insect-like appearance. They were once a thriving race on par with the Red Martians, but have since fallen into barbarism.

Green Martian Chieftain (Regular) d12

Traits: Leader, Veteran, 2 Fisted, Large

Weapons: Radium Rifle, Sword

Faction: Green Martian tribes

Green Martian Soldier (Regular) d10

Traits: 2 Fisted, Large

Weapons: Radium Rifle, Sword

Martian Beasts

Thott - 8 Legged Mount

Traits: Large, Sprinter

Barth - 10 Legged Lion creature d10

Traits: Ferocious, Thundering Charge

Giant 4 armed Albino Ape d10

Traits: Brawler, Ferocious, Large, Thundering Charge

Special Rules

Radium Guns have unlimited range. Pistols have a short range (5+ to hit) of 8" and Rifles and short range of 16". Long range is anywhere on the table. This requires an 8+ as normal.

The Martian Code of Honor says that ranged weapons can only be used until an enemy is within range to fight in Close Combat. Once an enemy is within charge range, a Martian must fight in Close Combat. Anyone who defies the Code is deemed a cad of the utmost cowardice and is fair game to both sides. Killing this cur gives **1 Renown point**.

Colonial Mars and Venus

After the invention by Thomas Edison of the Aether Propeller to explore space, the colonization of the solar system became possible. Soon, the Imperial Powers of Earth began a land grab across the stars. No one bothered to ask the natives how they felt. The colonial forces of Earth are much the same. Most have been trained in a similar fashion.

Colonial Earth Officer (Leader) d10

Traits: Leader, Master of Melee, Encouraging, Steady

Weapons: Pistol, Sword

Colonial Earth Sergeant (Regular) d10

Traits: Steady, Killer

Weapons: Rifle w/ Bayonet

Colonial Earth Soldier (Regular) d10

Traits: Steady

Weapons: Rifle w/ Bayonet

Colonial Earth Gun Crew (Team) d10

Traits: Cool Headed

Weapons: Pistol, Sword, Machine Gun

Native Martians are split between the civilized Canal City State Martians and the more feral Hill Martians. Some Canal States have become client states to the European Powers, even providing Native Levies.

Canal Martian Officer (Leader) d10

Traits: Leader, Brawler, Fearless, Lunge

Weapons: Pistol, Sword

Canal Martian Soldier (Regular) d10

Traits: Deadeye

Weapons: Martian Jezzail (16/32" range, must reload after each shot)
or Sword & Shield trading Steady for Swordsman

Canal Martian Gun Crew (Team) d10

Traits: Steady

Weapons: Pistol, Sword, Volley Gun (use flame template)

Canal Martian Shield Gunner (Regular) d10

Traits: Ranged Fighter

Weapons: Shield Gun (12/24" range, must reload after each shot, +1 Wound to roll) and Heavy Armor

*Martian Soldiers can be **Fearless** or have **Stables** to be Mounted.*

Martian Grank (Mount)

Traits: Agile

Hill Martian Chief (Leader) d10

Traits: Leader, Thundering Charge, Ferocious, Slippery

Weapons: Spear

Hill Martian (Regular) d10

Traits: Ferocious, Slippery

Weapons: Spear or Crossbow

*All Hill Martians are **Fliers**.*

The Planet Venus is covered jungles beneath its dense clouds. There live the primitive **Lizardmen**.

Lizardman Chief (Leader) d10

Traits: Leader, Infiltrator, Ferocious, Slippery

Weapons: Sword

Gatorgor (Specialist)

Traits: Large, Ferocious

Weapons: 2 Handed Ax

Lizardman (Regular) d10

Traits: Ferocious

Weapons: Spear

Lizardman Raptor Rider (Regular) d10

Traits: Horseman (Mount): Raptor- Ferocious & Armored

Weapons: Bow, Spear

Skinks (Grunts) d8

Traits: Small, Poison

Weapons: Bow

Final Transmission

So, what's with the new edition?

Well, the original **Galactic Heroes** is a few years old now. We've learned a few things in that time, tried new house rules, and generally improved the game.

This edition takes everything we've learned over the last decade of **Fistful of Lead** and added in the separate books, **the Vehicle Manual** and the **Codex Galactica** to make a newer, and hopefully better **Galactic Heroes**.

Along the way we've converted a lot of people who have grown fed up with more commercial rule sets tied to dedicated miniature lines. Who wants to spend the money and effort building a team (or sometimes an army) only to have a "new edition" come out and find your army is now obsolete?

Never fear! That will never happen here. It's still the same old game. It really is a tool box to make the games you want. I've used the rules to dig old Citadel lead from the early 1990s to play games set in a grim, dark future. I've also used them to play games set in a distant galaxy, far, far away.

Over the years, people have asked me if you can use the rules for Anime style battle suits or giant robots. The answer is yes! Simply match the traits to your style of game. I added plain old infantry to the game by making them Grunts. Each base of 3 little guys counted as a single miniature in game turns. They could still hurt the mech suits if they were lucky, but most of the real fighting was done between the "big guys".

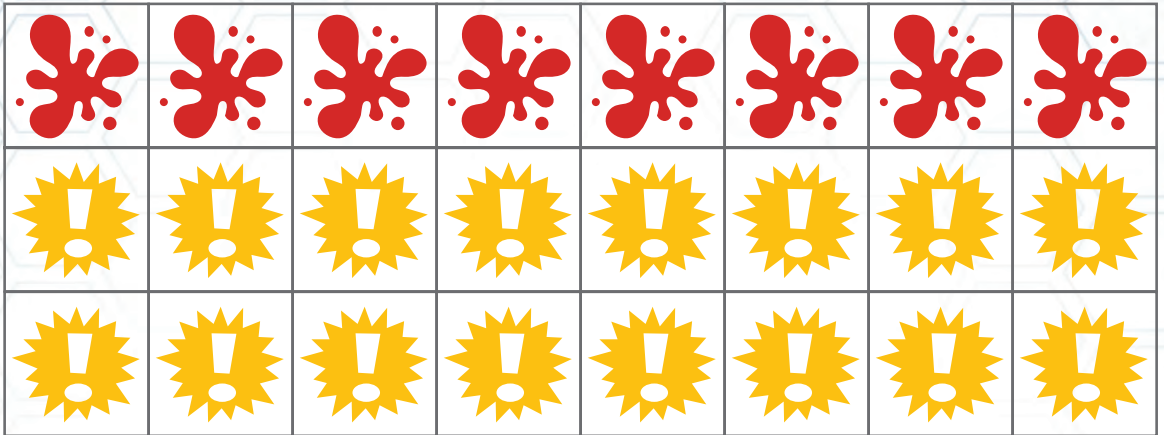

Pulp and Victorian Sci-Fi or Steampunk are easy to translate, due to the use of futuristic technology both genres have. Use the Galactic Monster rules for all those fantastic creatures found on Mars or in the Center of the Earth. Tarzan, the Phantom, and John Carter can be classed as Galactic Heroes. Simply rename them "Heroes of the Age".

We hope you enjoy this new edition. Your miniatures will thank you.

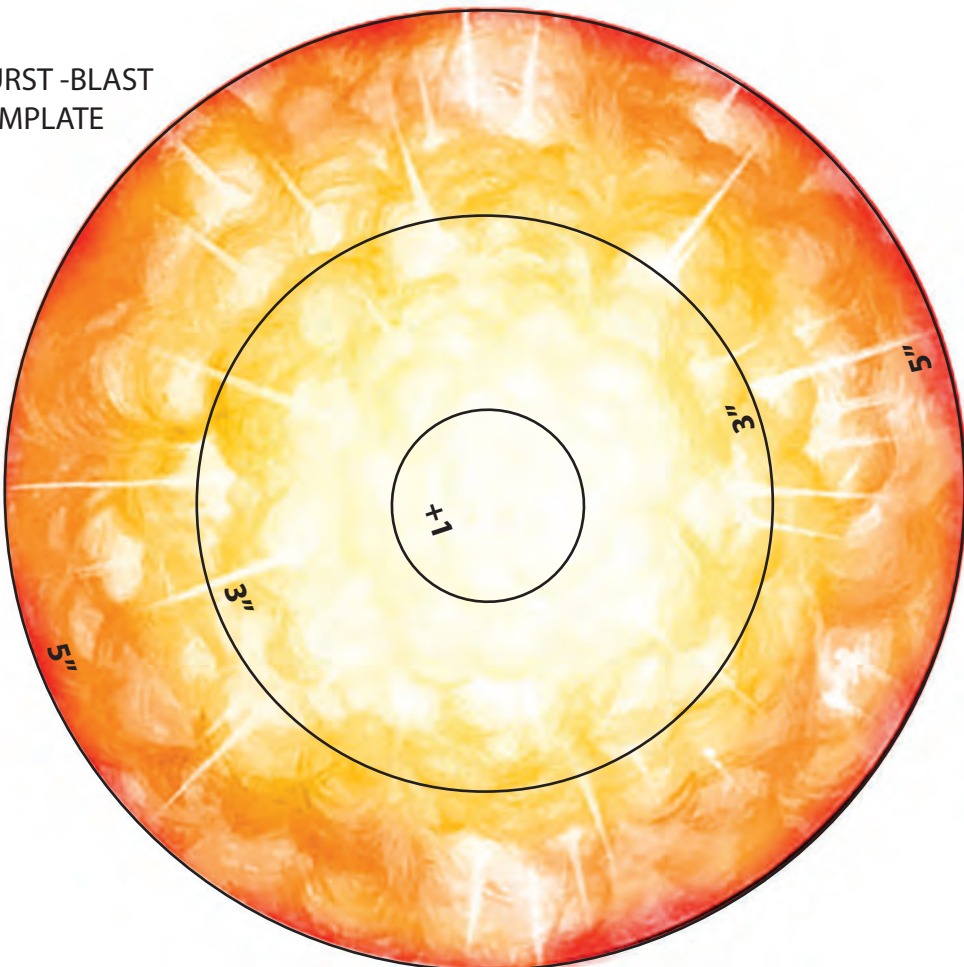

Jaye

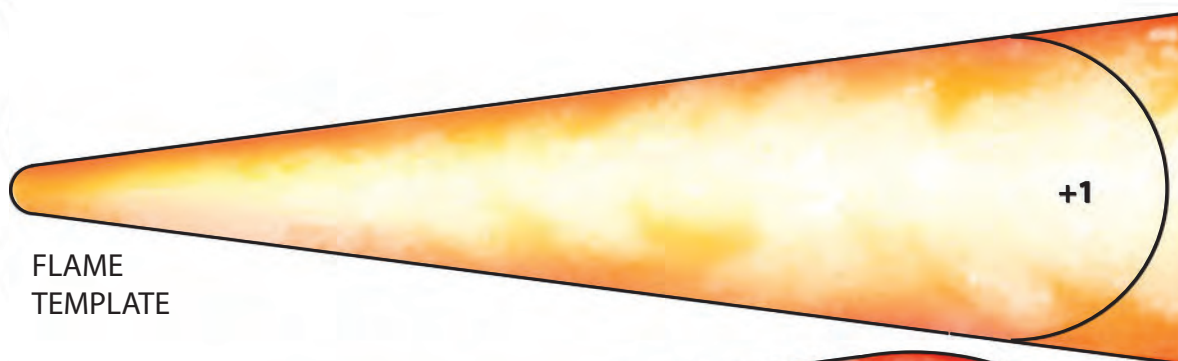

WOUND / SHOCK MARKERS

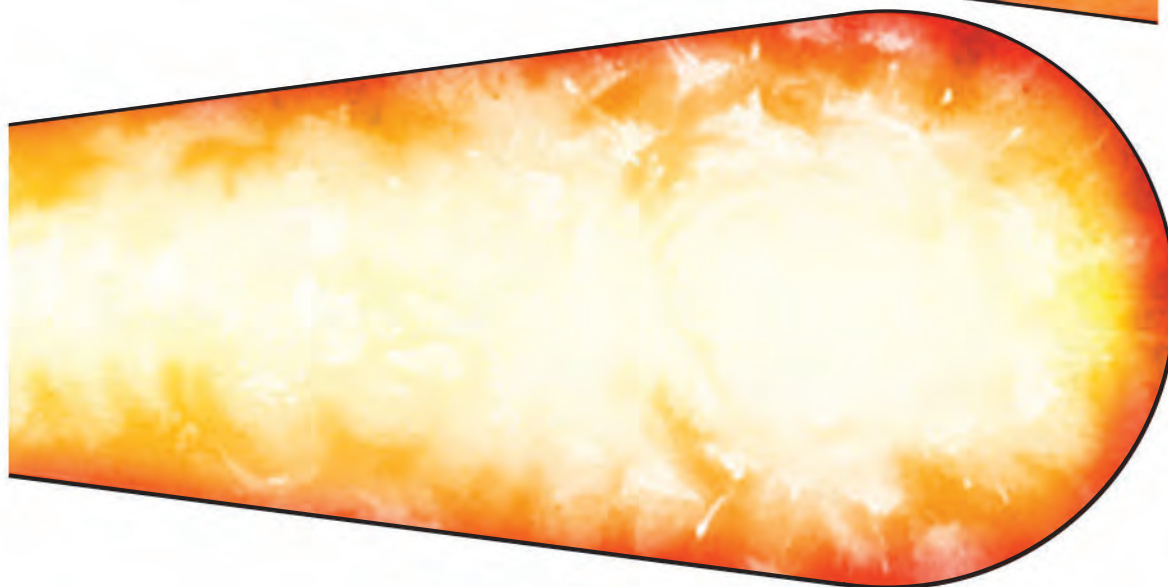

BURST-BLAST TEMPLATE

OVERWATCH / CREEP / AMMO

FLAME
TEMPLATE

FISTFUL OF LEAD
GALACTIC HEROES

TURN SEQUENCE

- 1- Shuffle all cards & deal one card to each player for each miniature
- 2- Activate models

CARD SUIT TURN SEQUENCING

MOVEMENT

FOOT: SNEAK 3" WALK 5"

MOUNTED: MOUNT 8"

WOUNDS: -1" of movement per wound, per action moving.

SHOCK: -1" of movement per shock marker, per action moving.

DIFFICULT TERRAIN: Half rate.

OBSTACLES: -1" for low walls and fences, full action for high walls

UP / DOWN FLOOR: -3"

SHOOTING

**THE ROLL TO HIT AT SHORT RANGE IS 5+
AT LONG RANGE IS 8+**

Shooting Modifiers to the Die Roll:

Cover:

Light Cover -1

Heavy Cover -2

Size:

Target is Small -1

Target is Large +1

Target is Huge +2

Wounds/Shock:

-1 for each Wound and Shock marker the shooting model has (see *Wounding*, below)

Movement:

Shooter is mounted

Target is mounted

Target is on the ground* -1

Target is Creeping -1

Actions:

Shooter used first action to Aim +1

CLOSE COMBAT

The two opponents both roll **d10** (or applicable die). Both models add any modifiers to the die roll. The highest modified die is the winner and subtracts the loser's die roll from his/hers. The difference in the two rolls give the following bonuses to the **Wound Roll**:

1-2: 0 3-4: +1 5-6: +2 7 or more: +3

If the score is a tie, the opponents remain locked in Close Combat in a very dramatic fashion.

Close Combat Modifiers to the Die Roll:

Wounded/Shock:

-1 for each Wound and Shock marker the figure has.

Mounted:

+1 if mounted (if defeated model is wounded, he is dragged from the mount) .

Outnumbered: -1 per attacker after first (i.e. -1 for facing 2 attackers, -2 for 3 attackers etc).

Prone or no weapon: -1

Close Combat Weapon: +? according to weapon.

Defending a wall/defensive terrain: +1

WOUNDING

Roll	Result
0 or less	No effect
1-5	Shaken
6-8	Wounded
9-10+	Out of Action

A +1 is added to the die roll for each Wound already sustained by the affected miniature.

3 Wounds puts a miniature Out of Action

RECOVERY

Shaken	Wounded
1: Route	Out of Action
2-5: Still Shaken	Still Wounded
6+: Not Shaken	Model may Stand

NOTE: Subtract -1 for each Wound and Shaken marker already sustained by the affected model.

SPECIAL CARDS

Queen of Spades- Remove all Shock
Queen of Hearts- Remove 1 Wound
One Eyed Jacks- +1 Shoot rolls
Other Jacks- +1 to Close Combat rolls

7 cards- Reroll one die result
6 cards- Reload Automatically
Deuce- Roll 2 dice, pick the best result
Aces- Wild
